

# Empowering RPA enthusiasts: “Harnessing the potential of Power Automate”

## Speakers

John Anastasopoulos  
Mustapha Lazrek

Christine Jefson  
Gautier Chastan  
Joe Fernandez  
Soufiane Loukili  
Dieter De Cock  
Jay Padimiti  
Ashwin Raju Krishnamurthi  
Grant Archibald

# Welcome!

1. Go to <https://aka.ms/mppc23-rpa-labs>
2. Start lab 1 (pre-requisites)

Workshop account password:  
**"Mppc23rpa"**

*If you're having issues installing the app on your machine,  
please let us know*

Module	Timing	ID	Session	Lab	Timing
Part 0: Pre setup work office hours	8:00 - 9:00	0	Environment and account check. Setup lab, troubleshooting		60 minutes
Workshop officially starts here					
Part I: Introduction	09:00 - 9:30	1	Lab prerequisites 1 – Install required software	Lab 1	30 minutes
	9:30 - 09:50	2	Introduction to RPA, Power Automate and Desktop flows		20 minutes
Part II: Desktop flows basic	09:50 - 10.20	3	Create your first Power Automate Desktop flow	Lab 2	30 minutes
	10:20 – 10:50	4	Use input and output parameters	Lab 3	30 minutes
Break (10 minutes)					
Part III: Desktop flow Web and Office integration	11:00 – 12:00	5	Subflows, Excel and Web automation, AI Builder with GPT action	Lab 4	60 minutes
Lunch break (60 minutes)					
Part IV: Hyperautomation	13:00- 13:30	6	Cloud integration (Outlook Trigger)- Machine connection & Attended run	Lab 5	30 minutes
	13:30 - 14:00	8	Intelligent automation: AI builder	Lab 6	30 minutes
		9	(Optional) Integration with Teams for Approvals	Lab 7	30 minutes
Break (10 minutes)					
Part V: Scale your automations and infrastructure	14:10 - 14:40	10	Hosted machines and unattended automation	Lab 8	30 minutes
	14:40 - 15:10	11	Monitor or troubleshoot desktop flow runs and machines	Lab 9	30 minutes
Part VI: Closing	15:10 - 16:00	12	Licensing update, Q&A		50 minutes

# Part I

# Introduction

# Lab 1

## Prerequisites - Install required software

30 minutes

# Microsoft Power Platform

The world's most complete set of integrated, low-code development tools

## Power Apps

for  
web and mobile  
application  
development

## Power Automate

for  
process  
or workflow  
automation

## Power Virtual Agents

for  
chatbots and  
conversational  
agents

## Power Pages

for  
building secure,  
data-centric  
business websites

## Power BI

for  
data exploration,  
analytics and  
reporting

Data  
connectors

AI  
Builder

Microsoft  
Dataverse

Power  
Fx

Managed  
Environments

# Microsoft Power Automate

The world's most complete intelligent automation solution  
now with AI copilot powered by GPT

**Digital Process Automation (DPA)**  
allows resilient, cloud-native automation through the creation of cloud flows

**Business Process Automation (BPA)**  
streamlines complex processes for end users at scale

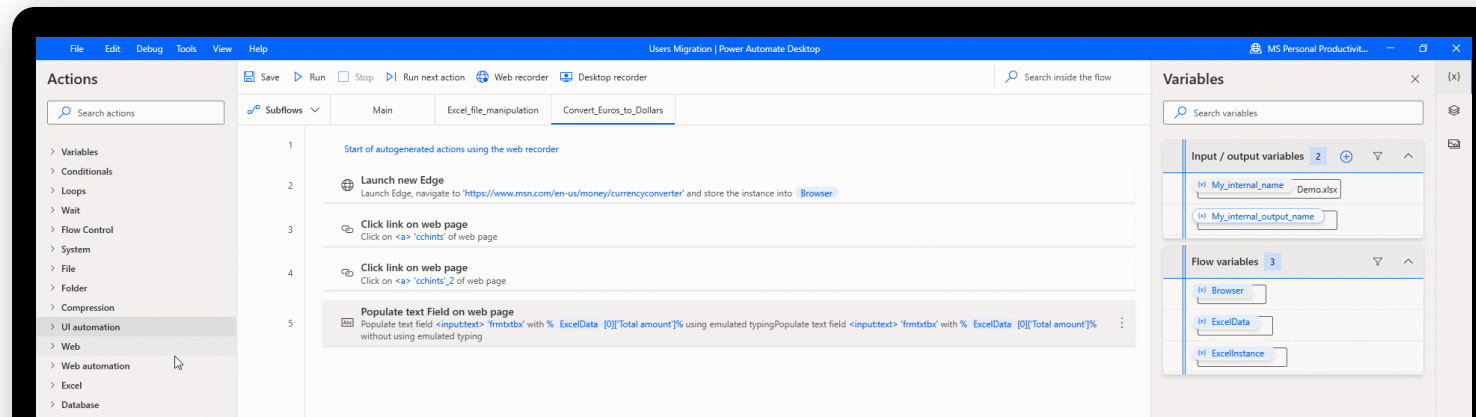

**Robotic Process Automation (RPA)**  
uses robots that emulate human actions to automate activities

**AI Builder**  
creates intelligent automated workflows

**Process/Task Mining**  
enables users to visualize processes and gain deep insights into opportunities to optimize

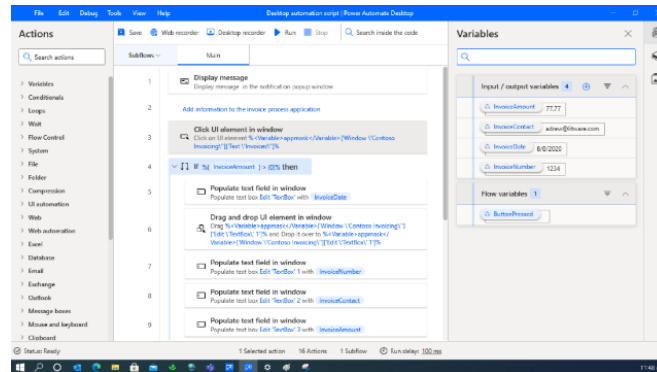

# Power Automate: Cloud and Desktop flows

Old apps  
without APIs

Desktop flows  
RPA

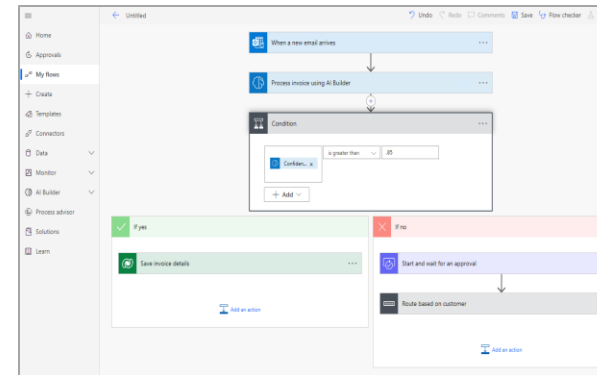

Power Automate  
bridges the gap,  
across on-premises and cloud

Modern Systems  
with APIs

Cloud flows  
DPA

# 17+ years of RPA experience

2005

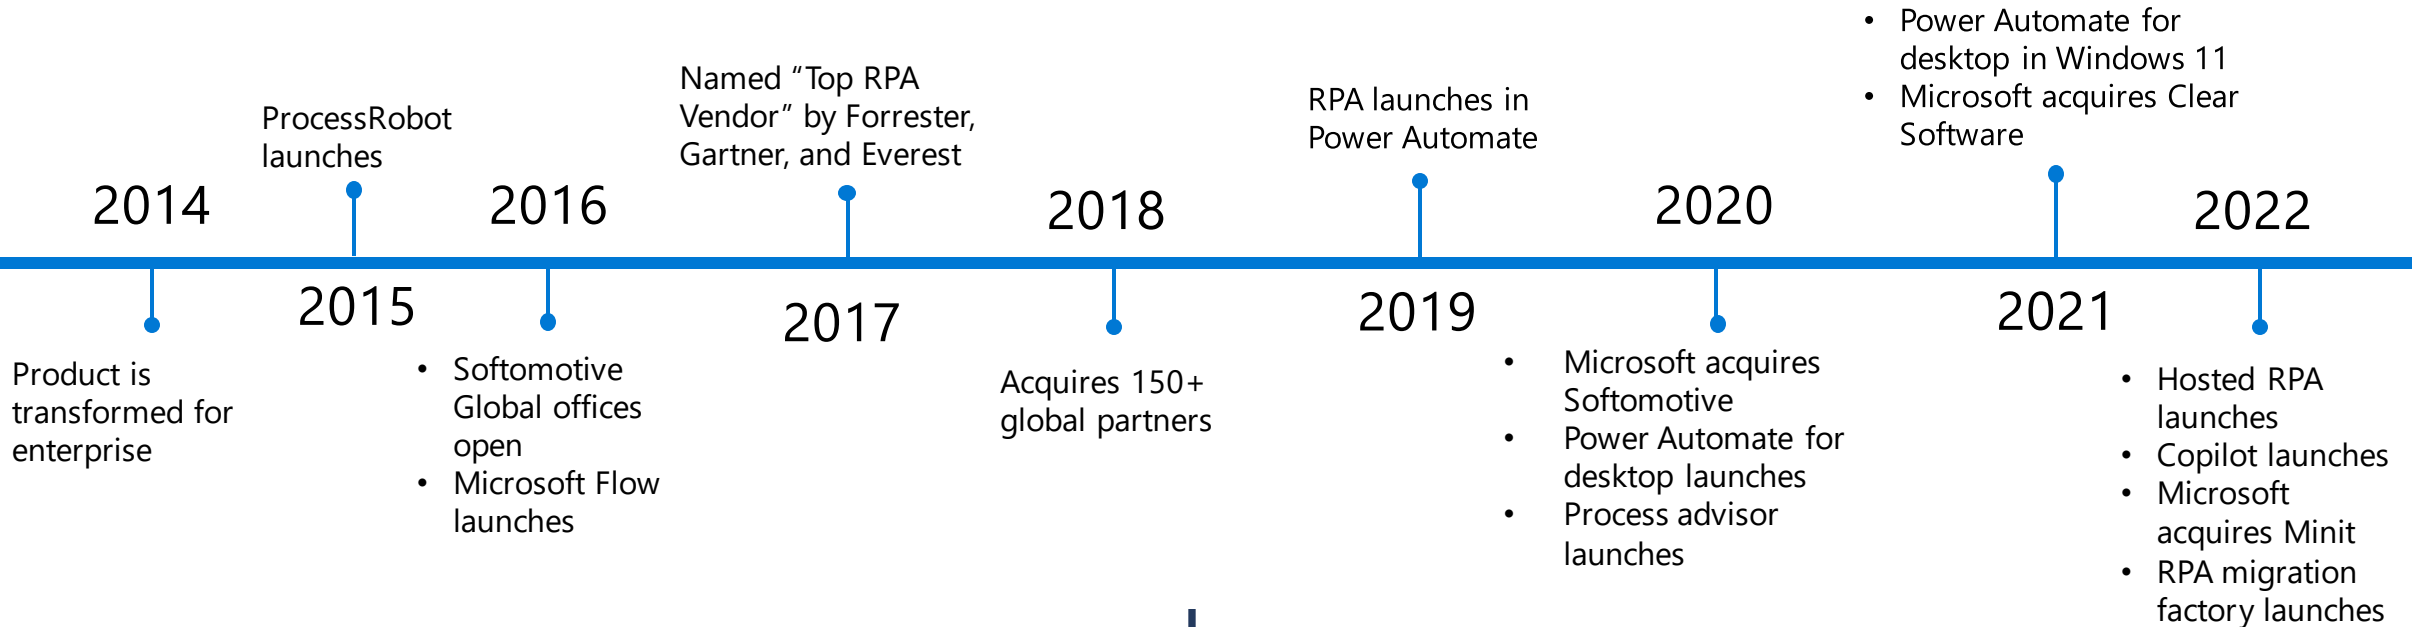

Softomotive founded in Greece

2006

WinAutomation launches

500,000+

Organizations use Power Automate monthly

21 regions

42 languages\*

\*Power Automate for desktop is available in 15 languages

# Introducing Power Automate desktop flows

**Ease of use** - Low-code/no-code Drag & drop approach with Recorders (Desktop and Web)

Input –Output and flow **variables**

Advanced **Debugging** features

Reusability of **Controls, Images** and **Subflows** or even desktop flows

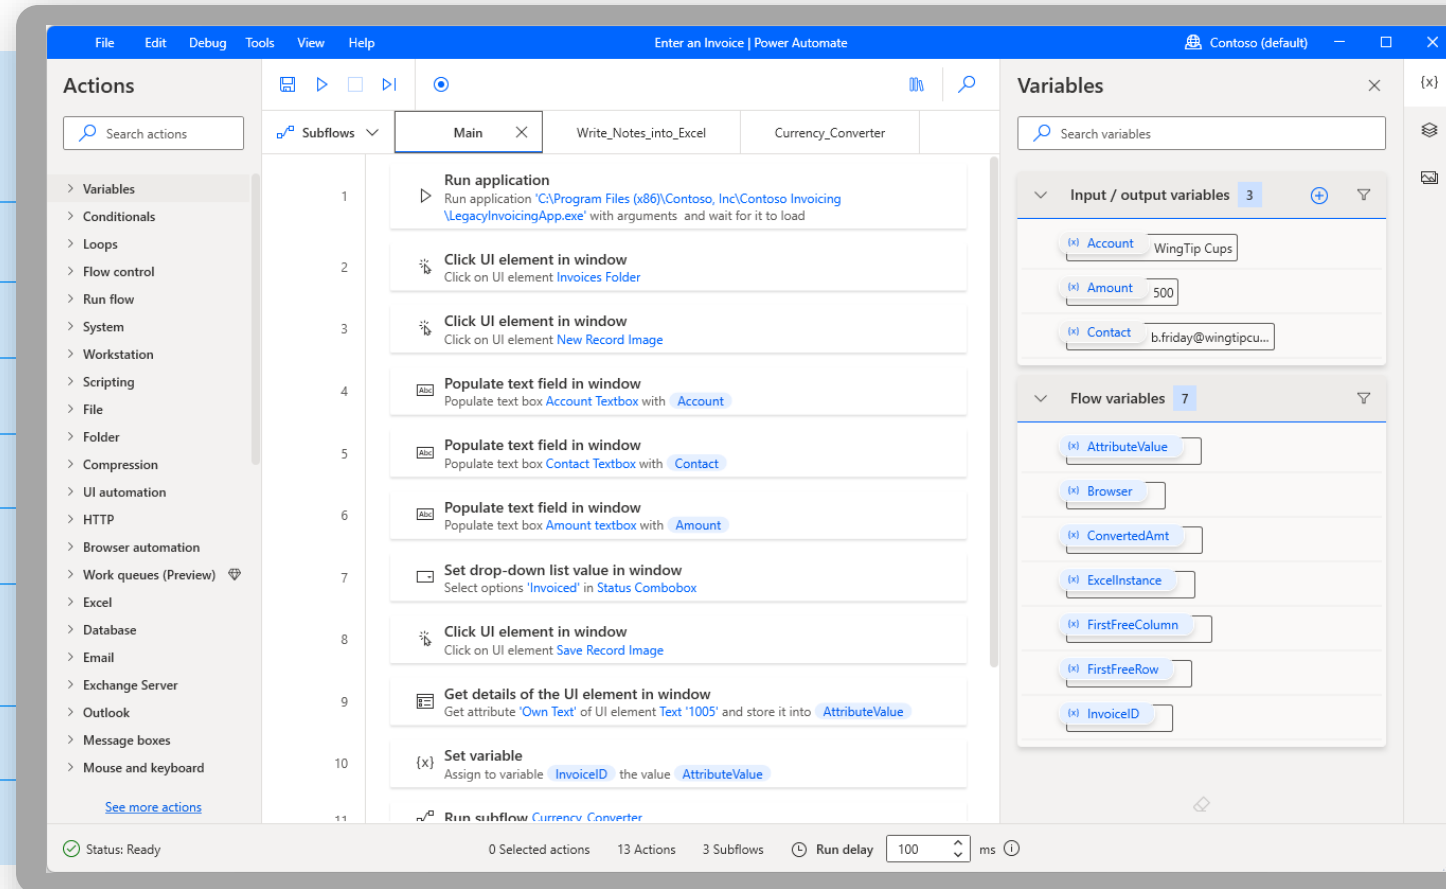

User and Process collaboration through **message boxes** for attended

Advanced **Error handling** features with 2 error handling levels

Support for advanced **coding-scripting**  
(VBScript, JavaScript, Python, PowerShell, Command Line)

**Local Attended, Attended** and **Unattended** execution mode

500+ **actions** to choose from + Cloud **connectors** and **Custom Actions**

...and more

# What sets us apart

## AI-centric

Infuse AI, including GPT and Microsoft's AI capabilities, into business processes for a differentiated intelligent automation

## Democratization

Lowest price and most citizen-friendly experience + pro-dev enablement with governance that responsibly empowers both

## Cloud-first

Natively integrated with seamless extensibility to central governance and collaboration for complete enterprise security and trust

87% of chief innovation officers and IT professionals believe *"increased AI and automation embedded into low-code platforms would help them **better use the full set of capabilities.**"*<sup>1</sup>

<sup>1</sup> Microsoft's [Low-Code Signals 2023](#) report

# Lab scenario Overview – Contoso Coffee shop company Invoice processing

Email triggers cloud flow

AI Builder extracts data

Desktop flow interacts with  
desktop app, Web, GPT

Confirmation email sent  
back

A vendor of Contoso Coffee shop has delivered the order and would like to process the invoice. The vendor sent the invoice pdf file to Contoso Coffee shop by email

Power Automate monitored the inbox of Contoso Coffee shop, used AI builder to extract information from the invoice file attachment

Power Automate desktop flow will open the legacy desktop application that Contoso Coffee shop using to manage invoices and fill in the invoice details

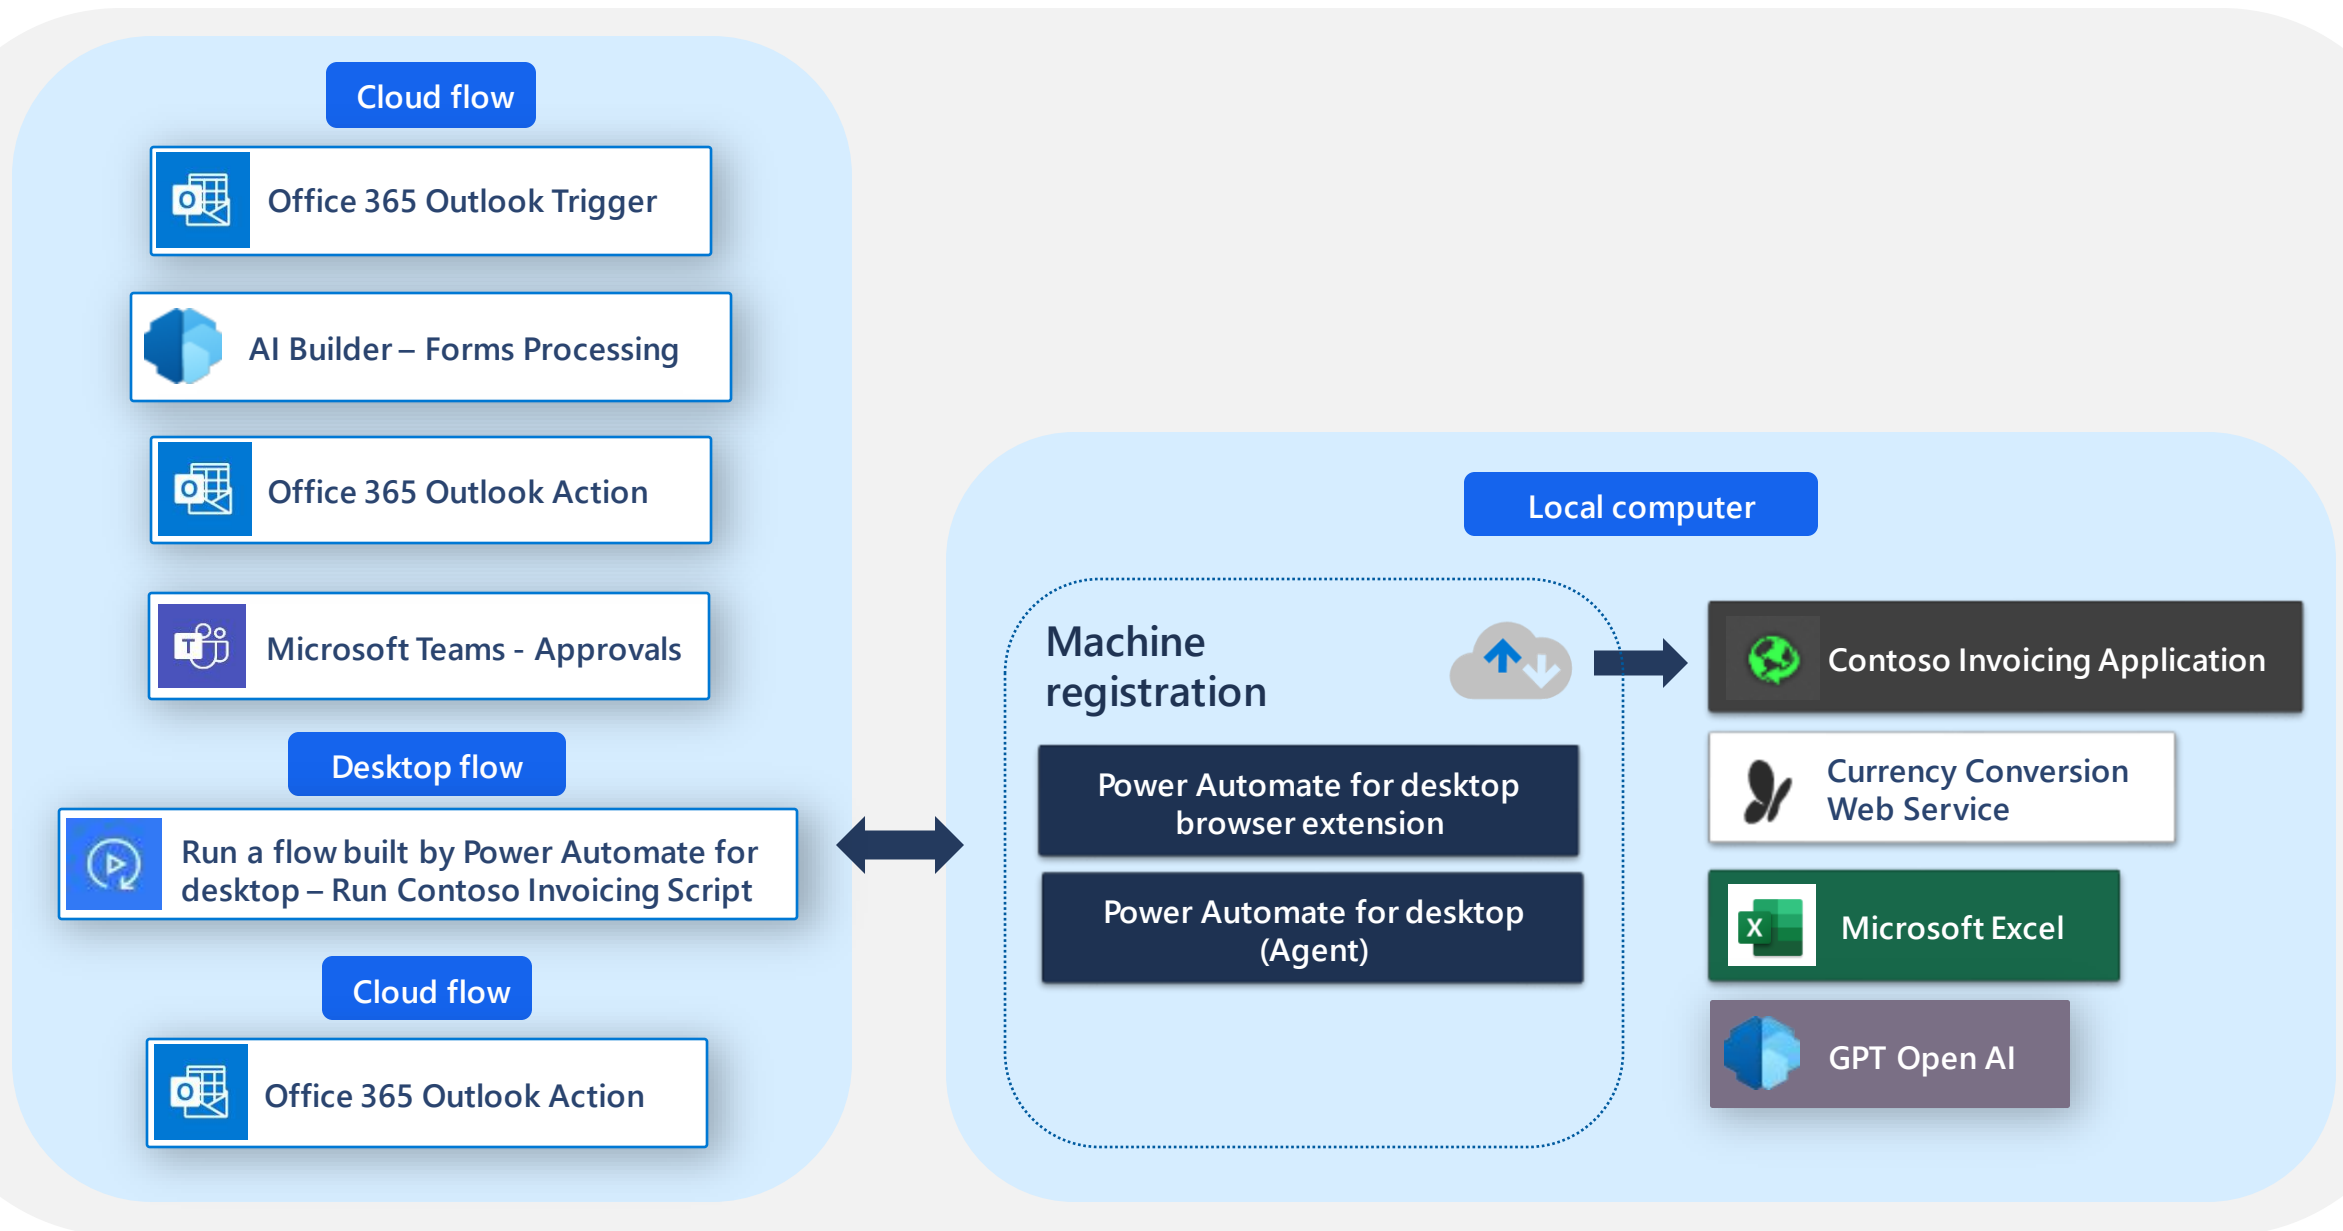

In the Desktop flow a web-based real-time currency conversion is used and an audit log is captured in Microsoft Excel

Power Automate sends an email back to the vendor to notify that the invoice has been approved

# Lab scenario – Invoice processing Solution Architecture

# Part II

## Desktop flows basic

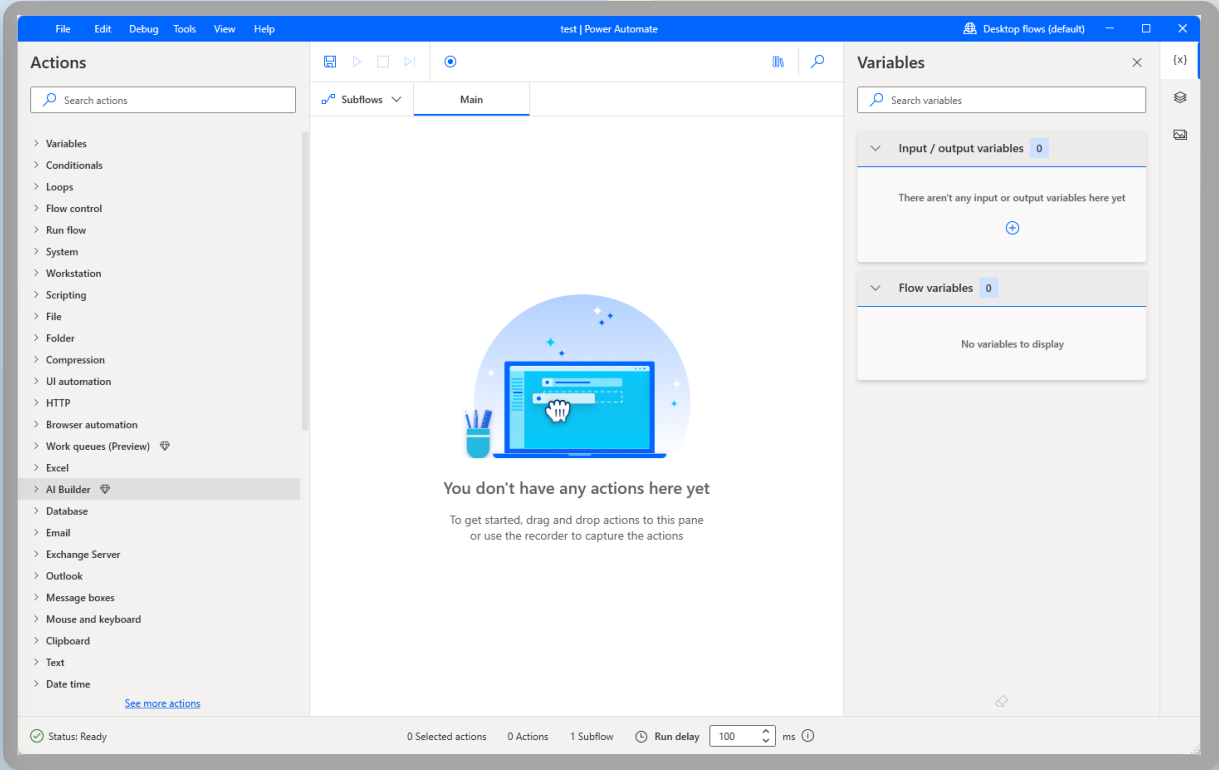

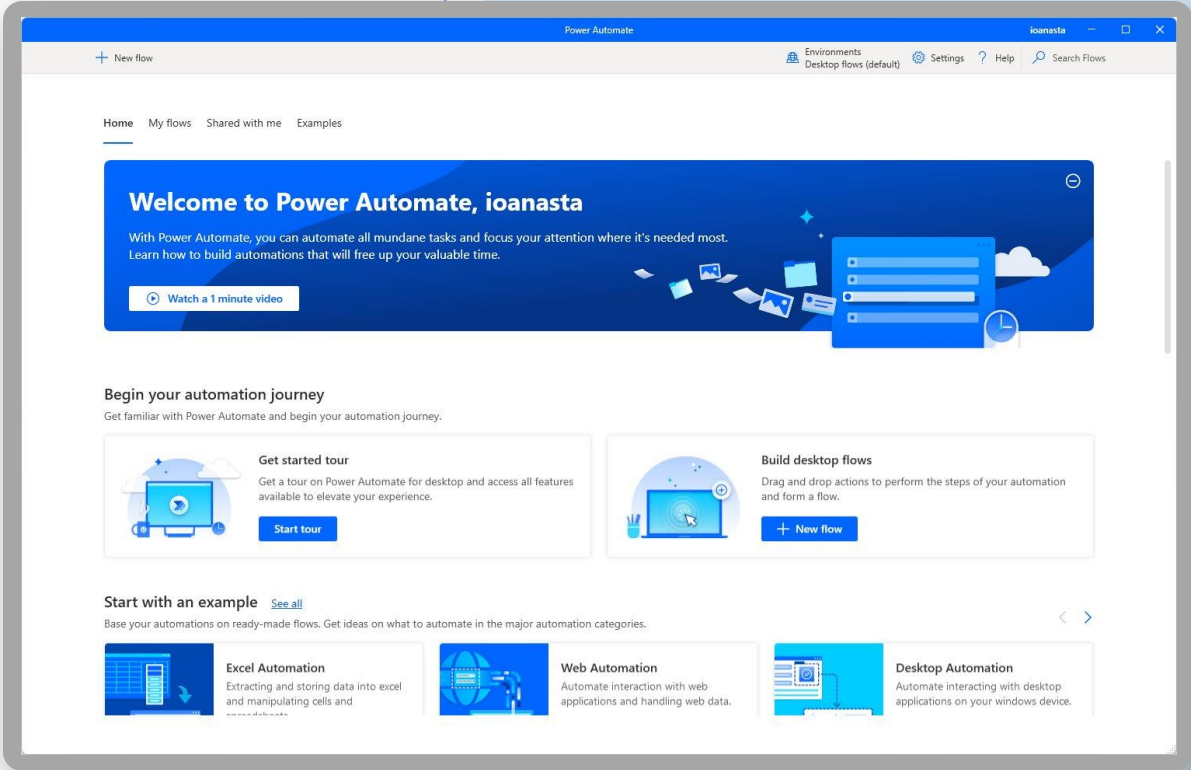

# Lab 2

## Create your first Power Automate Desktop flow

30 minutes

# Power Automate for desktop

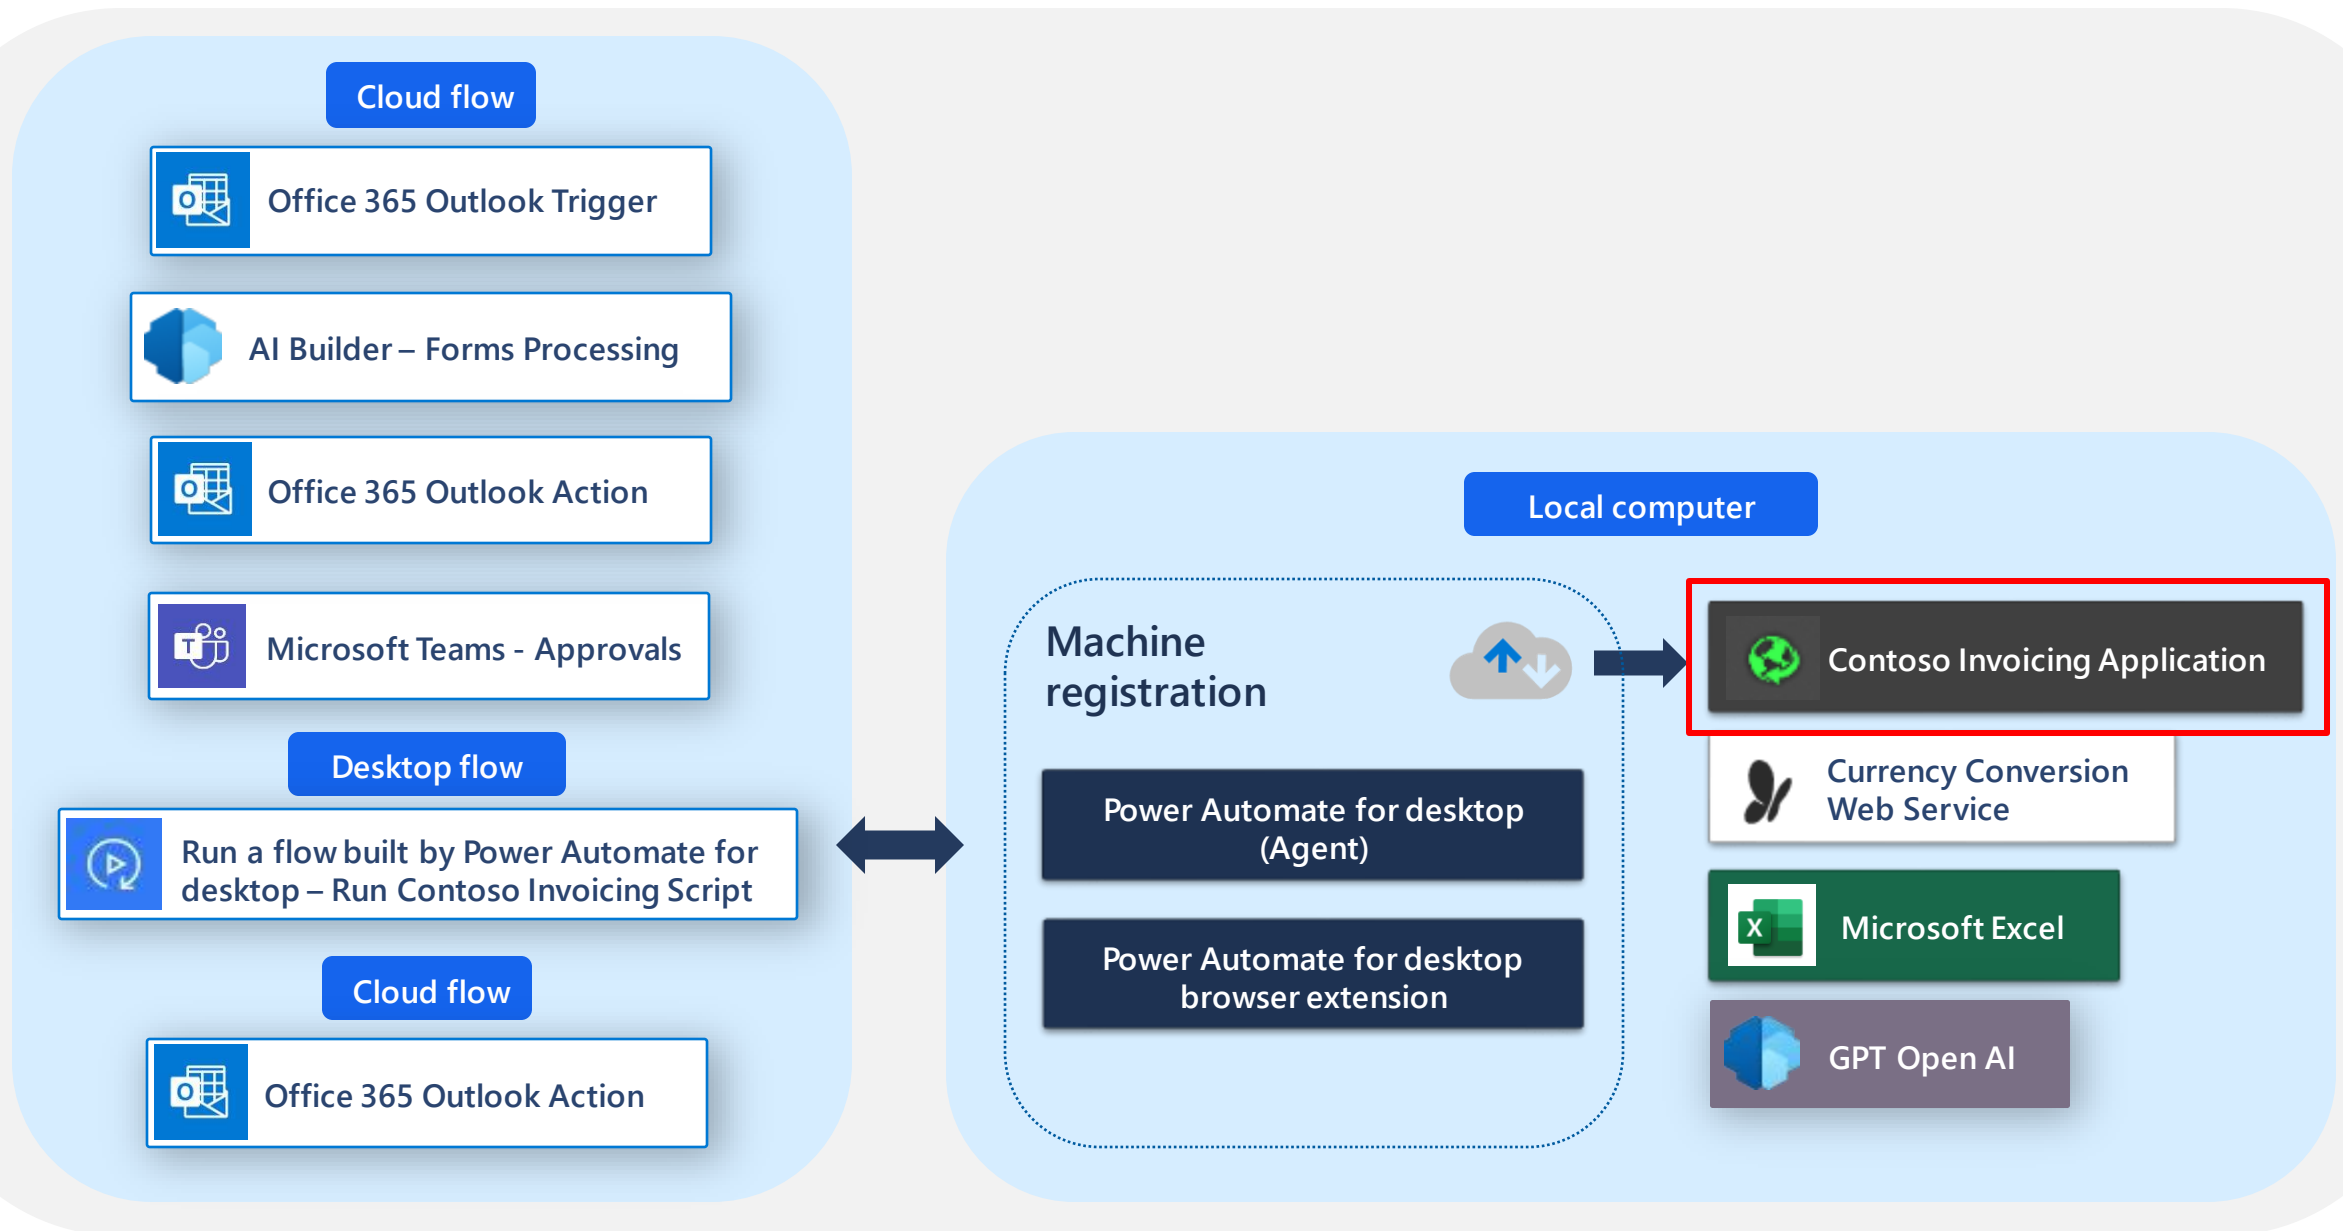

PAD Console

PAD Designer

# Where are we in the scenario in this Lab?

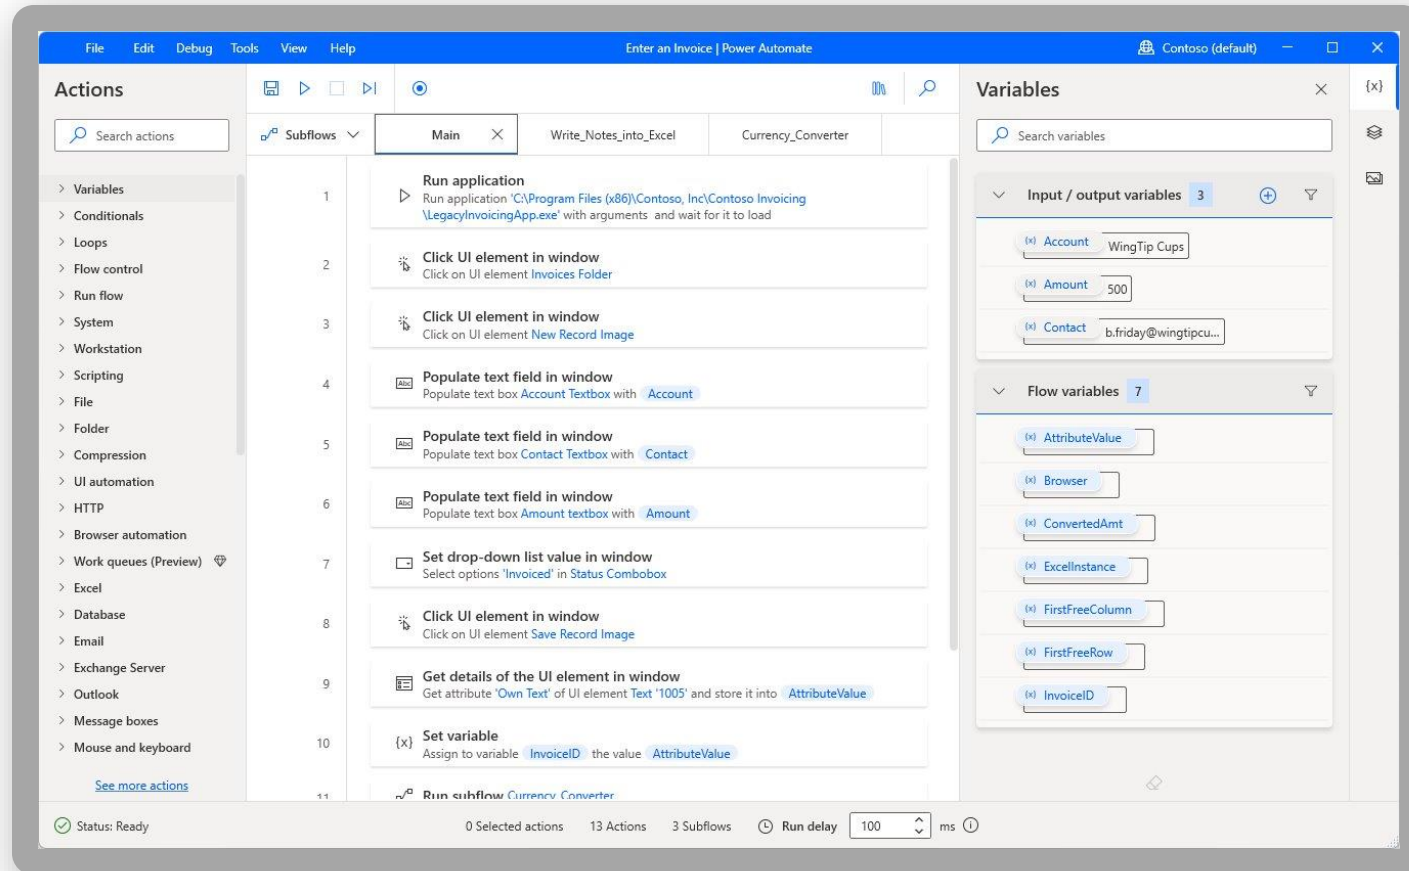

# Lab 3

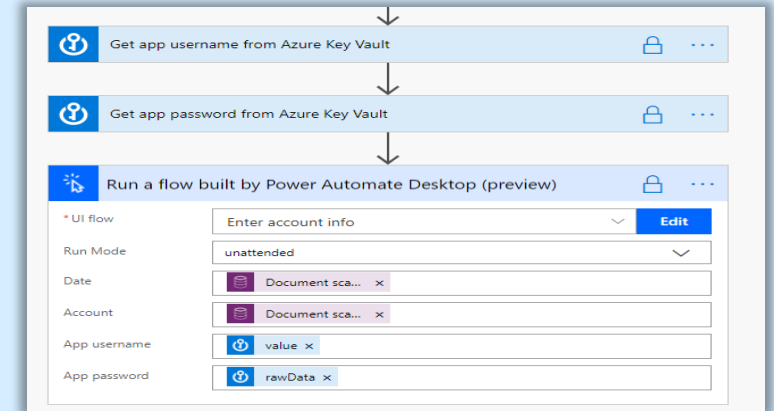

## Use input and output variables

30 minutes

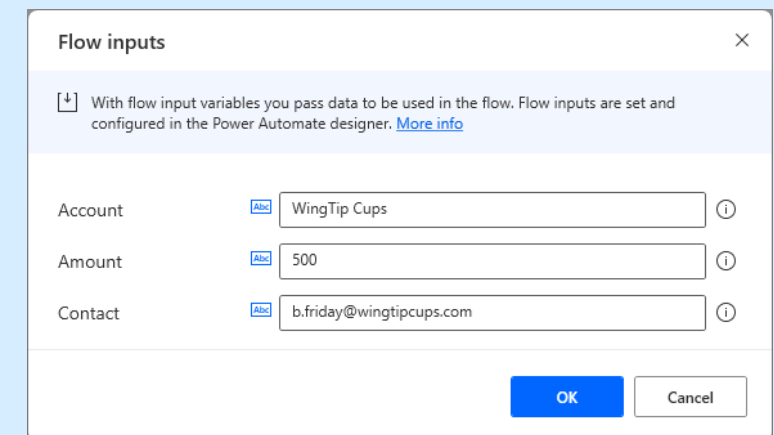

# Why use inputs/outputs?

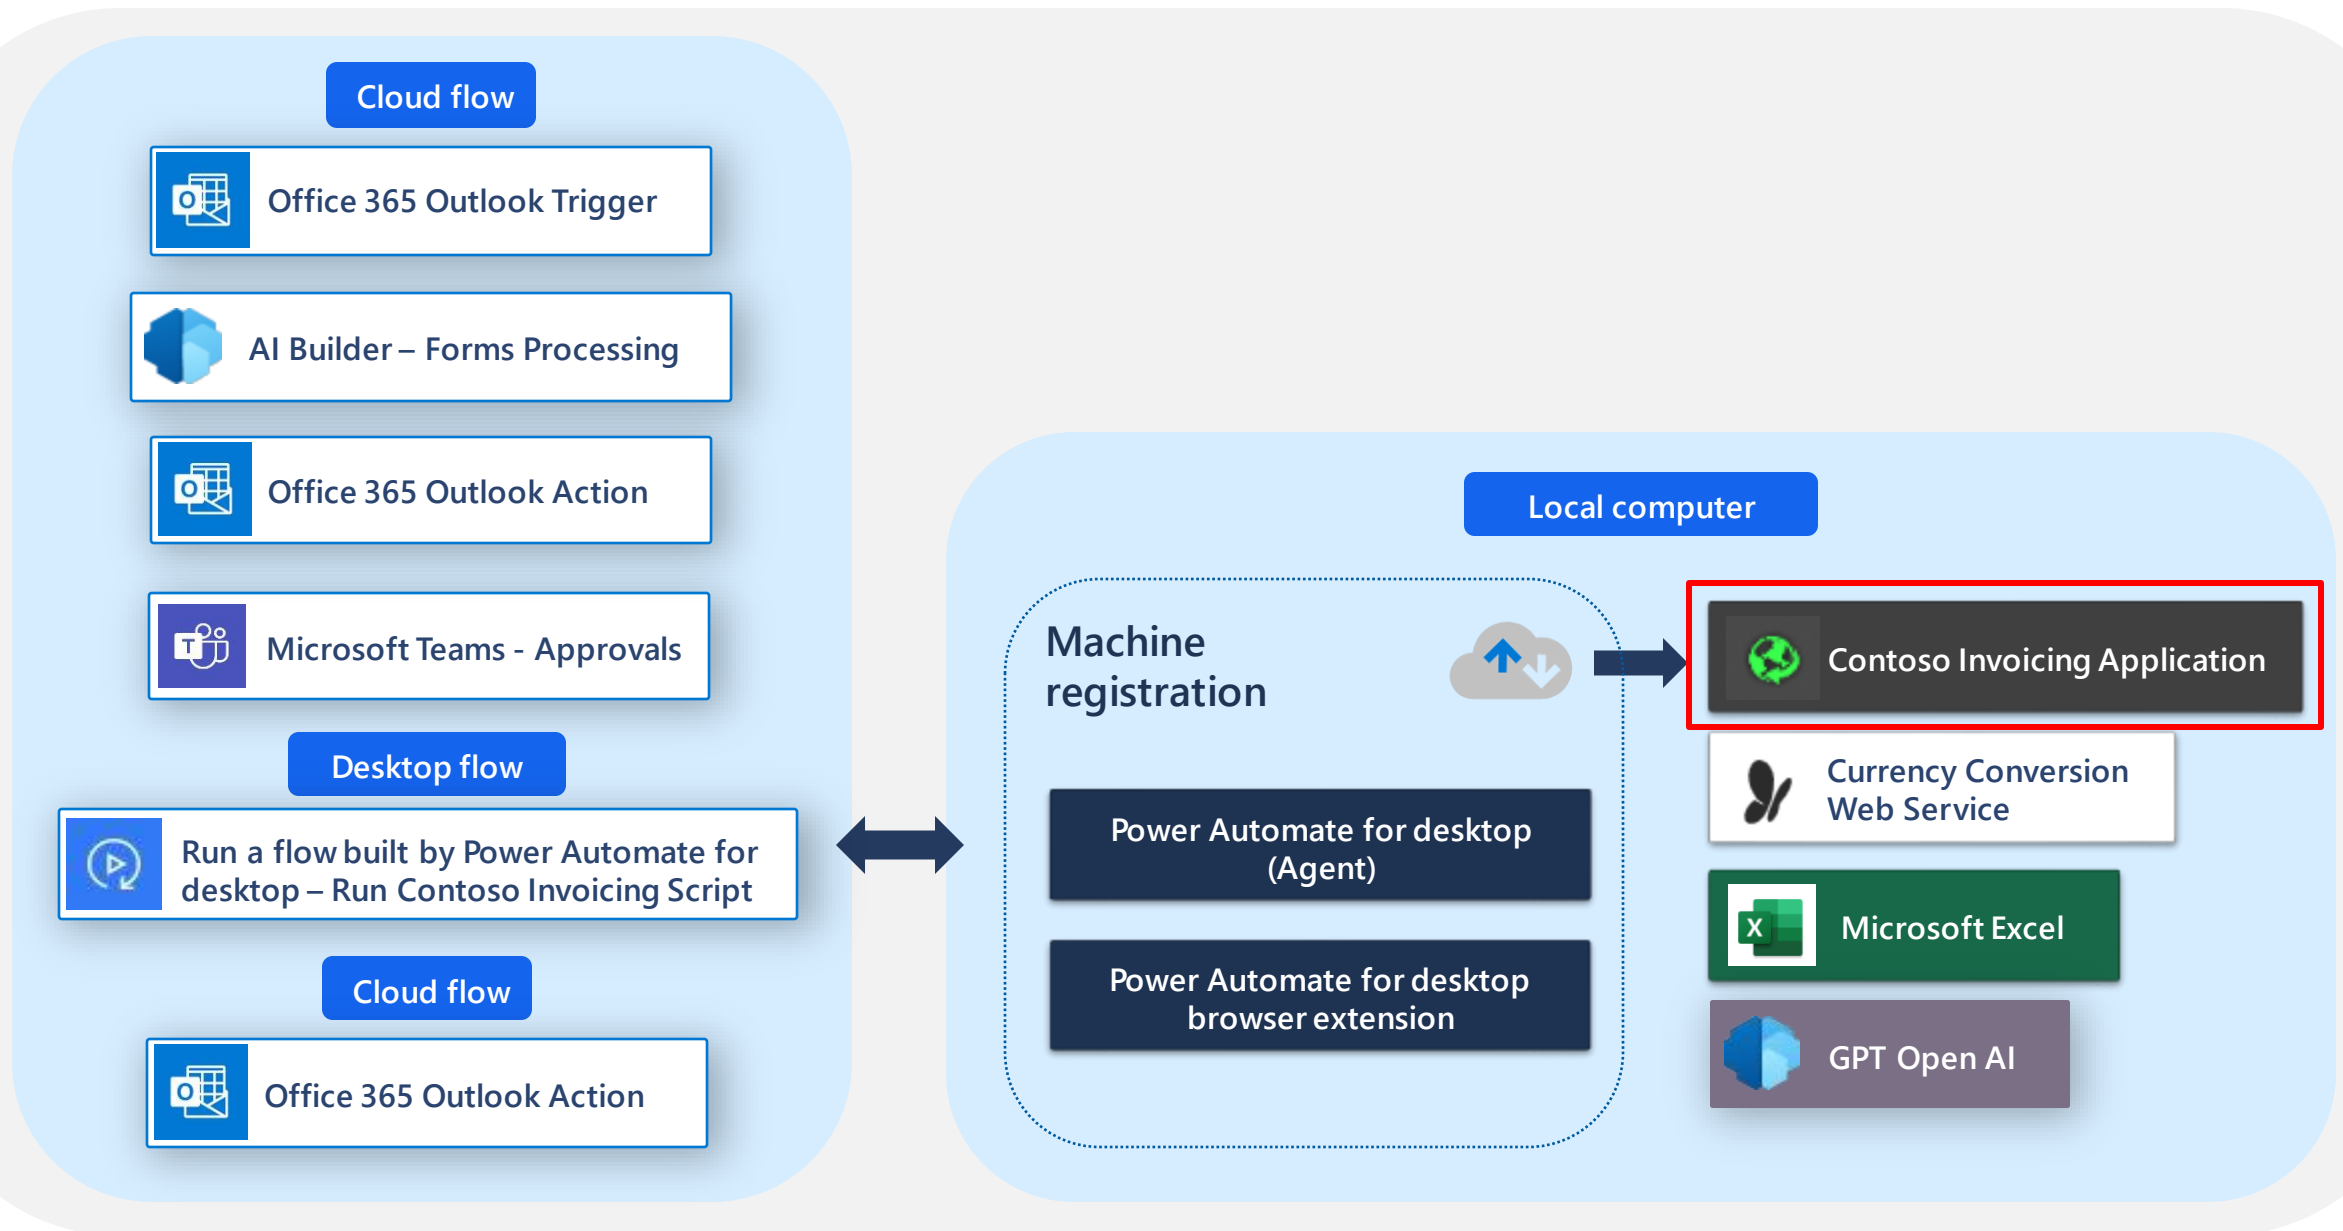

Bind them in the cloud flow that runs the desktop flow

Use them to run a local attended desktop flow

# Where are we in the scenario in this Lab?

# Part III

## Desktop flow Web and Office Integration, GPT

# Lab 4

## Subflows, Excel and Web Automation AI Builder with GPT action

60 minutes

# Subflows, Excel, Web, GPT

## Exercise 1

Build a Power Automate Desktop subflow to write notes into Microsoft Excel

---

Create a process with fixed value variables.

## Exercise 2

Build web automation using Power Automate for desktop

---

Web data scraping and writing to Microsoft Excel

## Exercise 3

Use AI Builder within Power Automate for desktop

---

Use the GPT action on Azure OpenAI service to summarize the details of invoices

# Subflows in Power Automate for desktop

Split the logic of the flow into subflows that can be called from anywhere in your flow

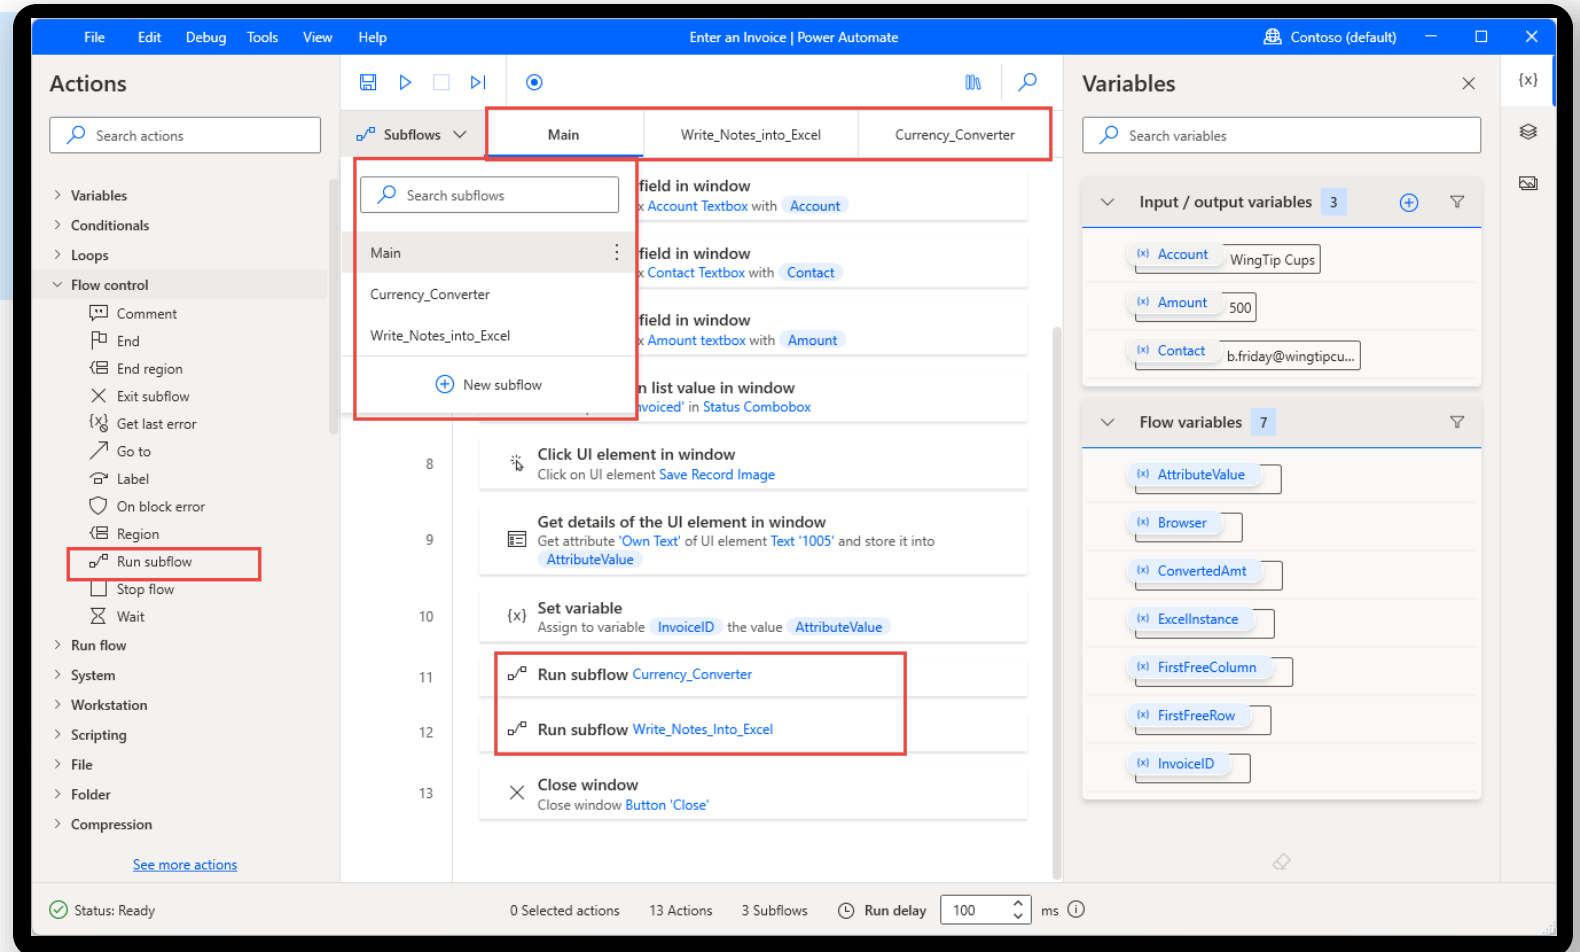

Better organization

Better readability

Better troubleshooting

Reusability

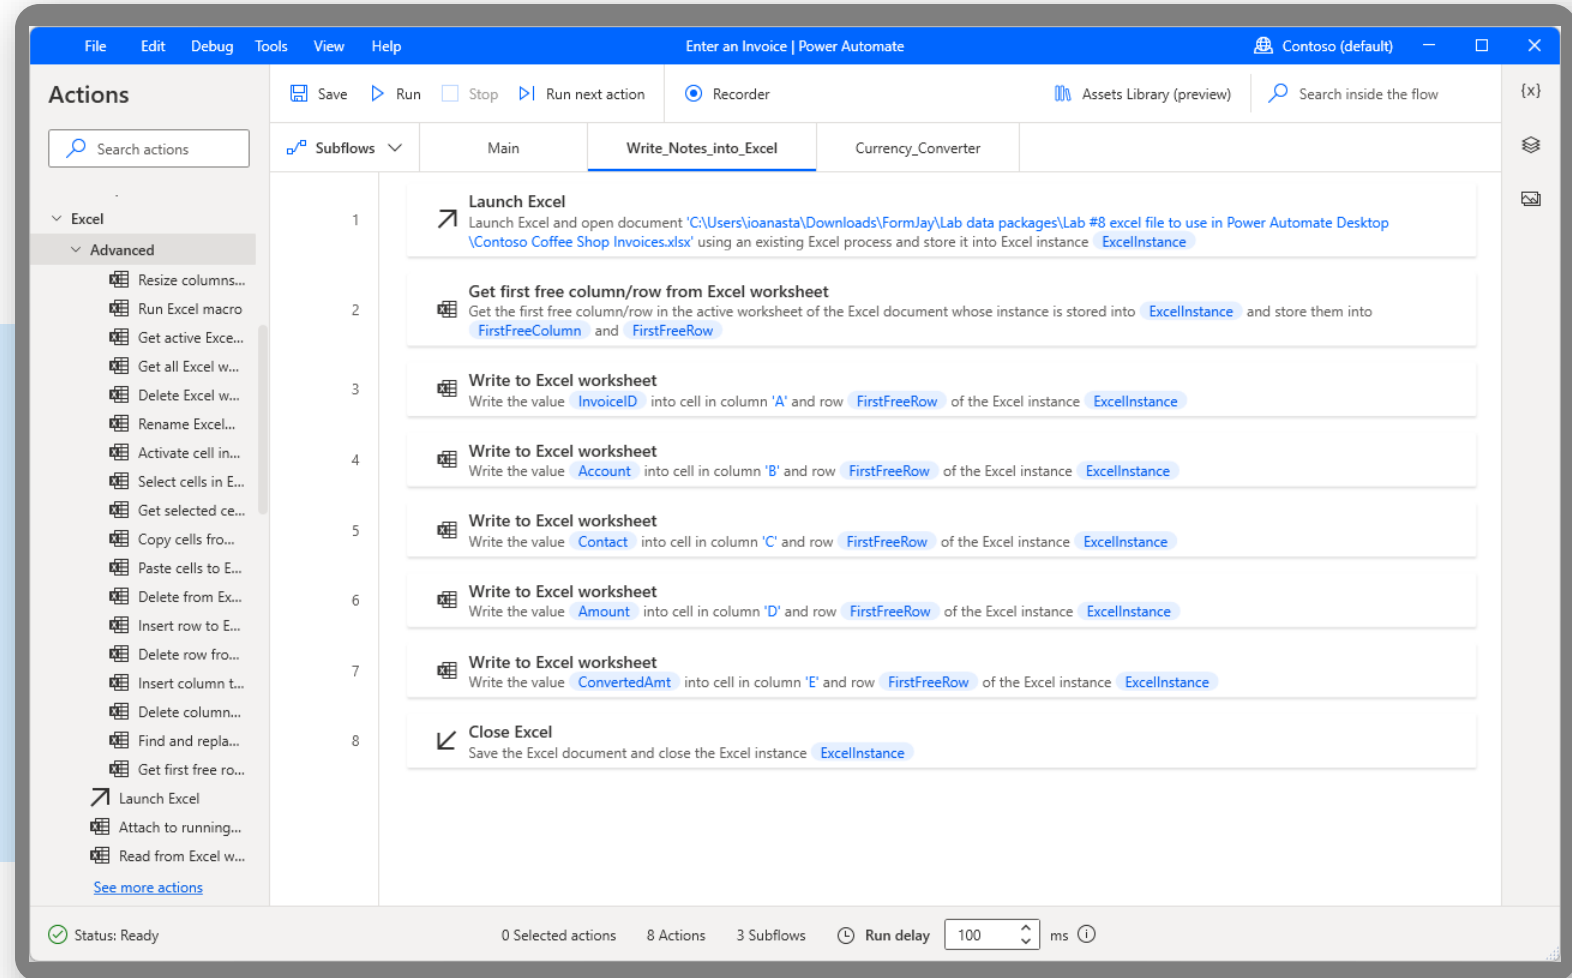

# Excel Automation

A wide range of excel actions that help automate any excel related task.

# Web Automation

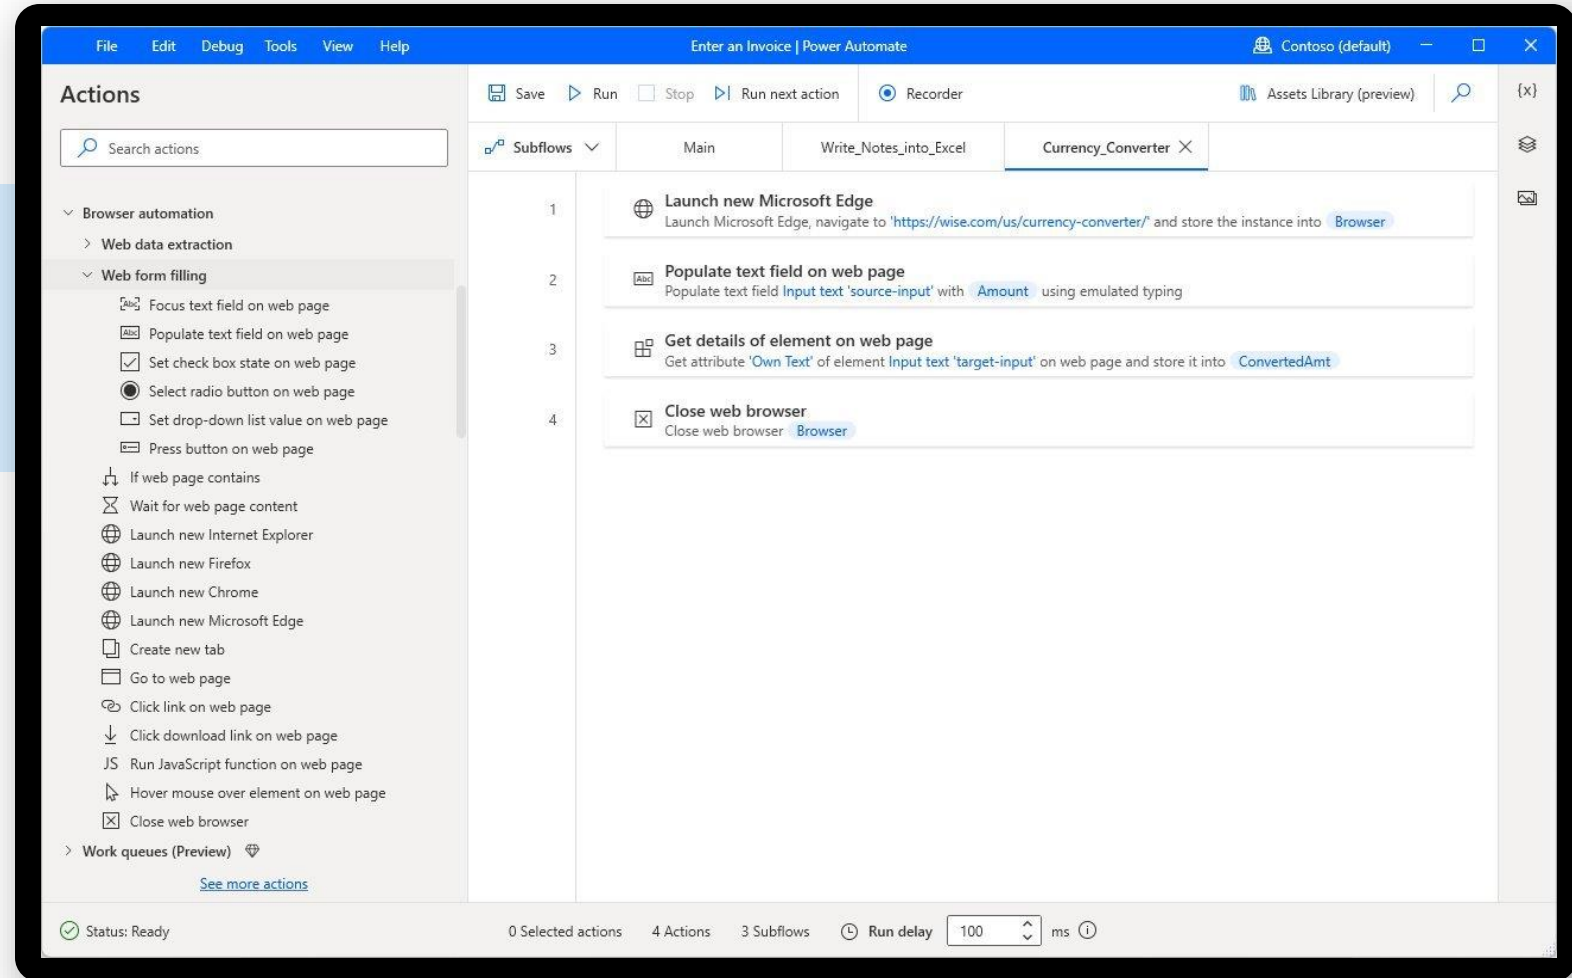

Web Automation supporting:  
Edge, Chrome, Firefox browsers

Web data extraction

Web data filling

And any web related activity

# GPT on Azure OpenAI

Get a response from Azure OpenAI service

Choose a template  
or write your own instructions

Create text with GPT on Azure OpenAI Service

Get a response from Azure OpenAI Service. [More info](#)

Select parameters

Instructions:

Al-generated content can have mistakes. Make sure it's accurate and appropriate before using it. [Read preview terms](#)

Create instructions

Variables produced: [PredictV2Response](#) [PredictV2TextResponse](#)

On error Save Cancel

Create instructions

Try a template or write your own instructions

Respond to a complaint

Create blog posts

Extract information from text

Classify text

Sentiment analysis of text

Extract action points from a text

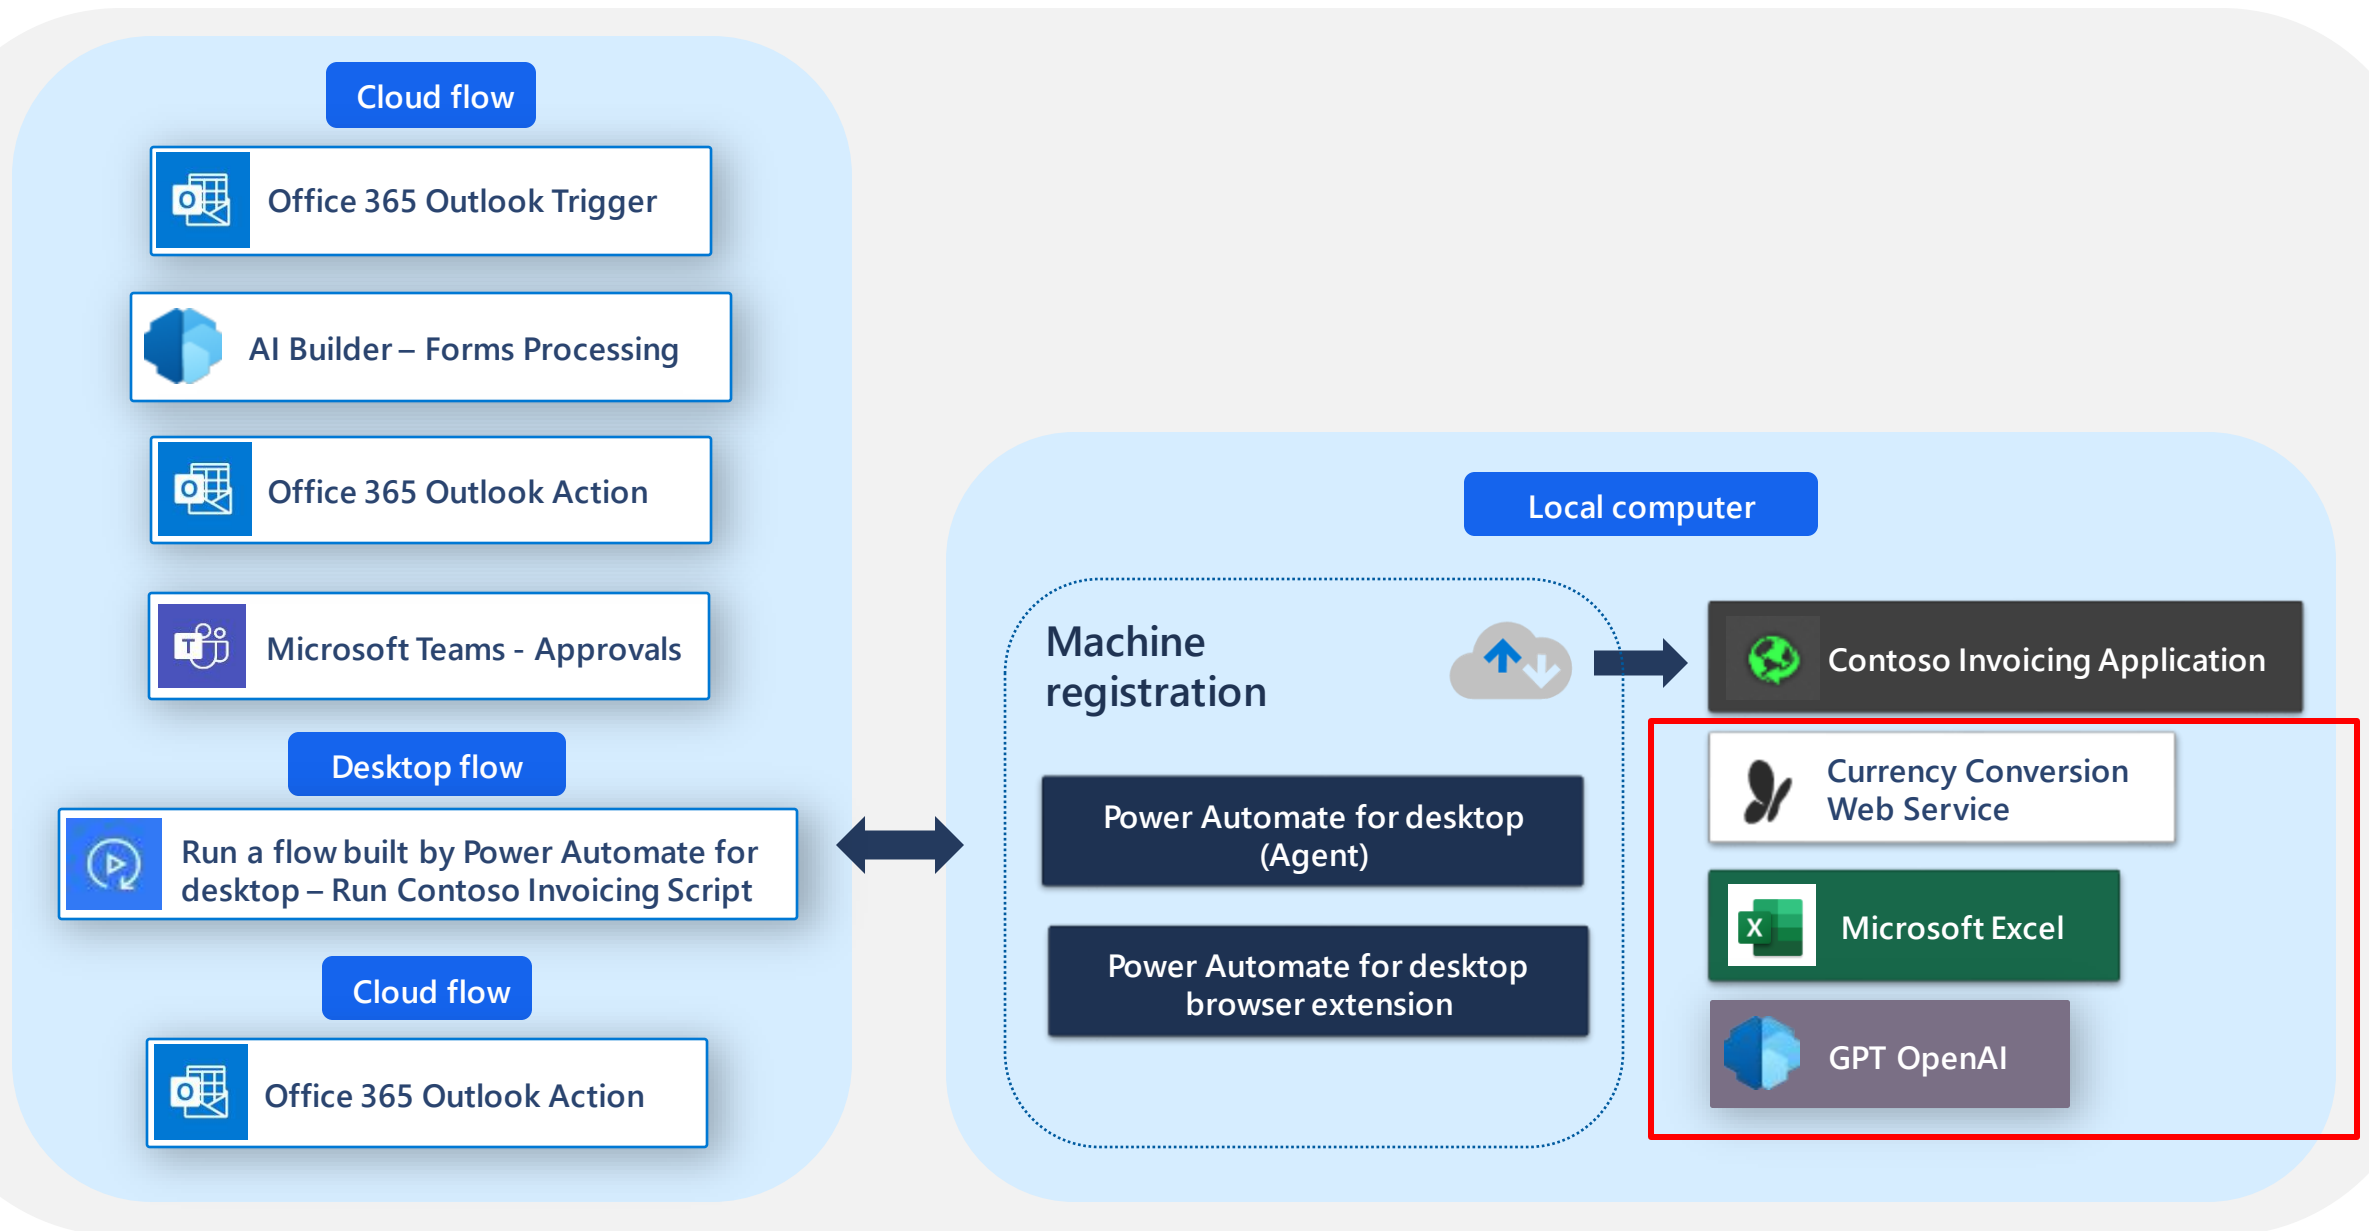

Reminder email message about a task

Fact checking Q&A bot

Resources

[See documentation](#)

# Where are we in the scenario in this Lab?

# Part IV

## Hyperautomation

- Cloud Flows and triggers
- Intelligent Automation with AIBuilder
- Integration with Teams for Approvals (optional)

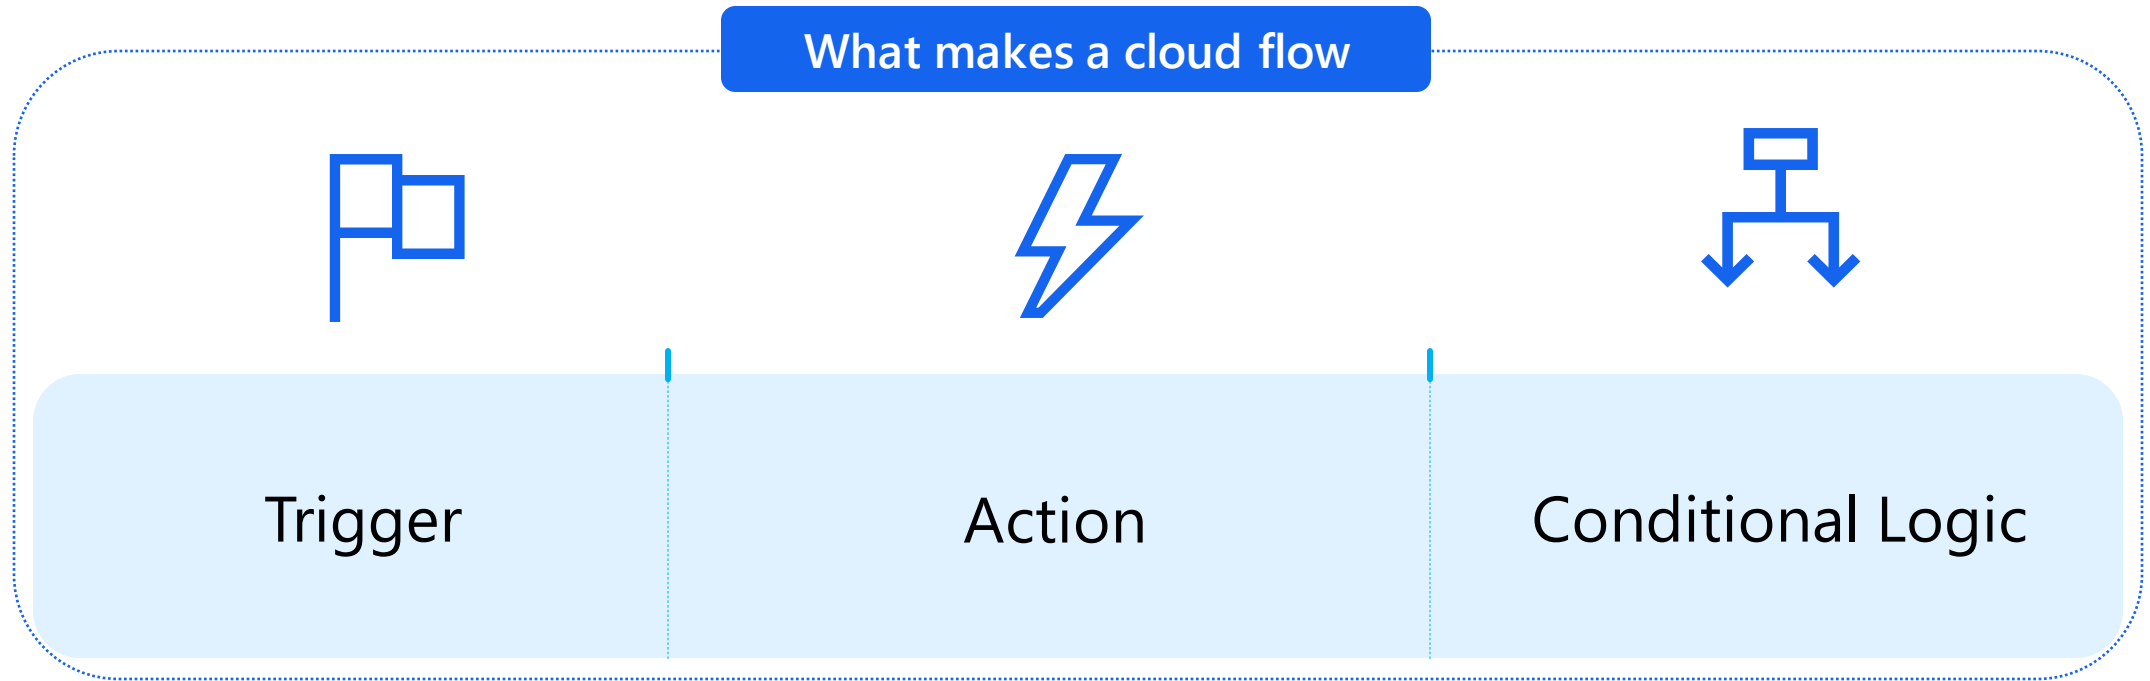

# Lab 5

## Cloud Integration (Outlook trigger) Machine connection and Attended execution

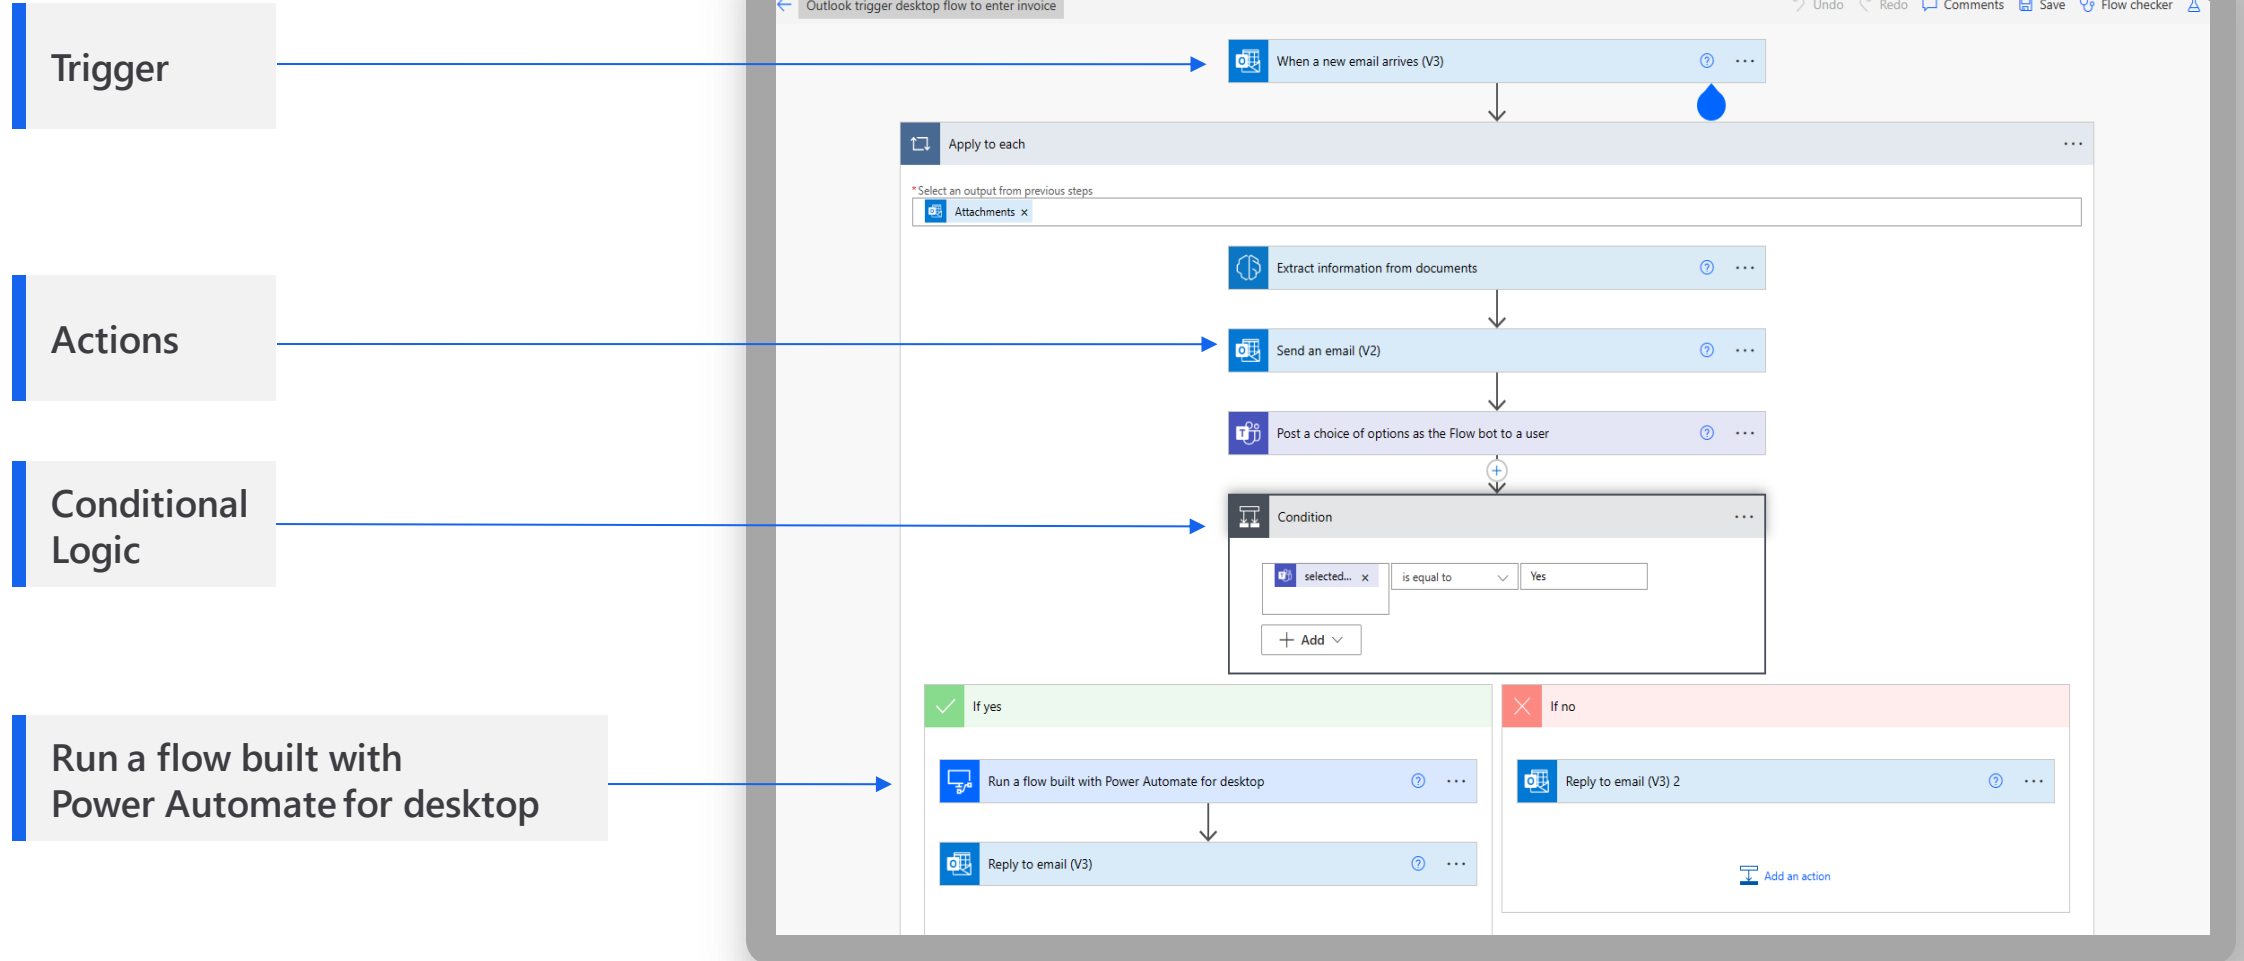

30 minutes

# What is a Cloud flow?

A cloud service that allows you to automate your business process

# Cloud flow: Trigger - actions - conditional logic

# Machine registration/connection

Allows cloud flow to call machines directly, without on-premises data gateways

Allows cloud flows desktop flows on local machines

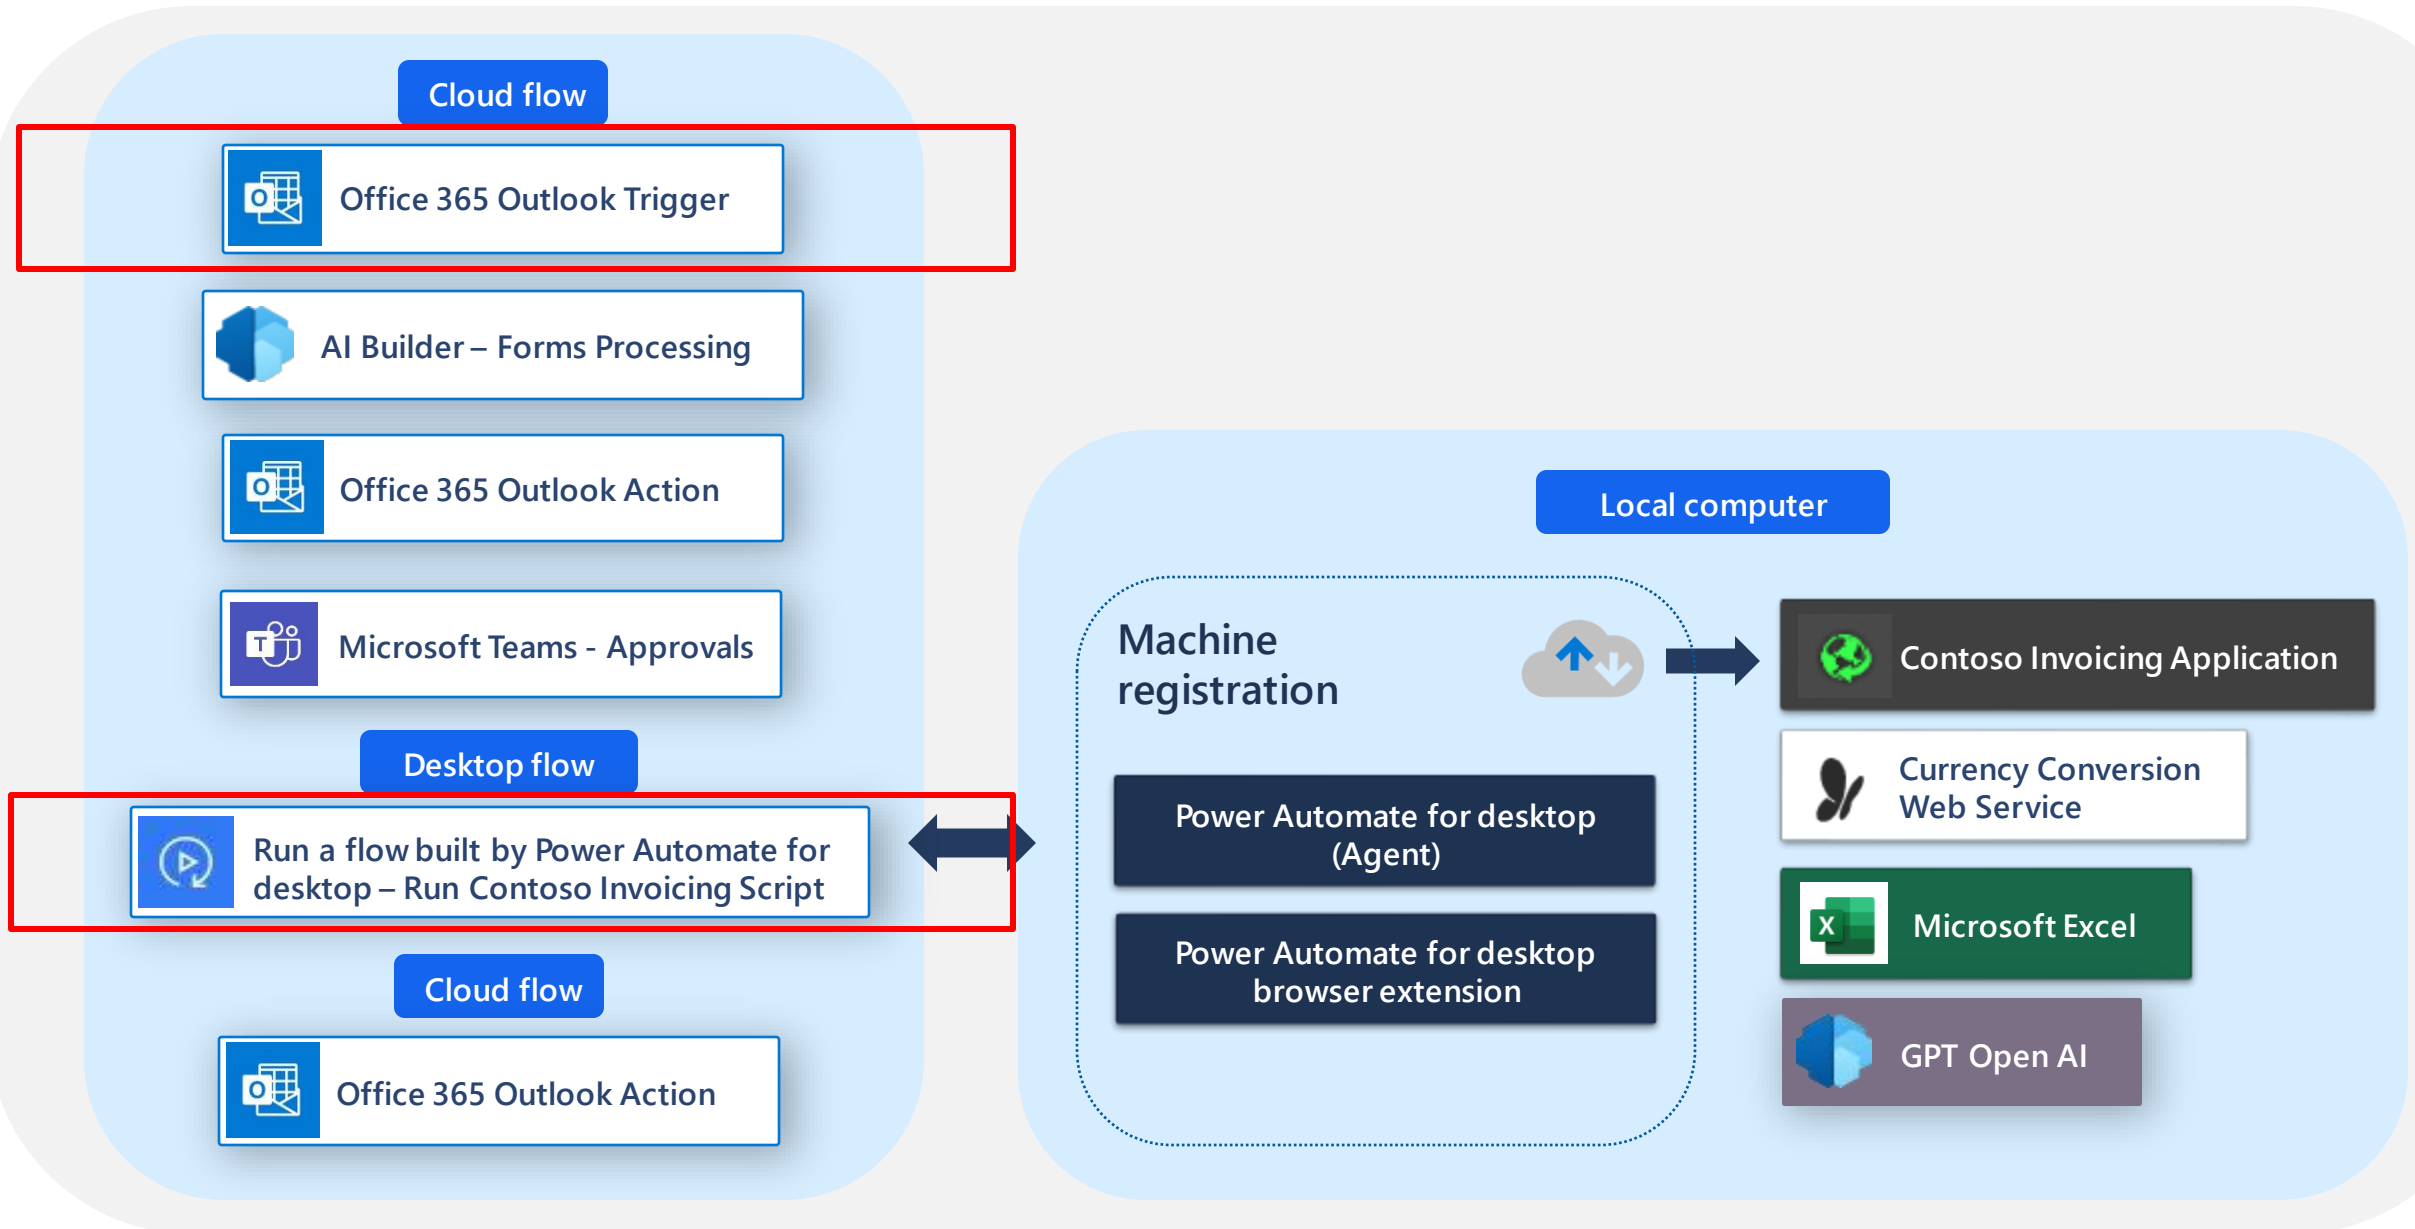

Once registered, can be managed from the cloud

The screenshot displays the Power Automate interface. The left sidebar shows the navigation menu with options like Home, Action items, My flows, Create, Templates, Connectors, Data, Monitor, Cloud flow activity, Desktop flow runs, Desktop flow queues, Machines, AI Builder, Process advisor, Solutions, and Learn. The main area shows the 'Machines' section with a table listing various machines and their status.

Machine name	Description	Group	Status	Flows running	Flows queued	Access	Owner
High-density device	—	—	Busy	3	2	Owner	Carlos Slattery
IBMKT-HHTB2	Very long description of a machine that is L...	IBM machines group	Online	0	—	Co-owner	Allan Munger
IBMKT-HHTB24	-	IBM machines group	Busy	1	—	Co-owner	Robert Tolbert
IBMKT-HHTB3	This is a very long machine description rela...	IBM machines group	Busy	2	—	Co-owner	Henry Brill
IBMKT-HHTB5	This is a long machine description that give...	IBM machines group	Online	1	—	Co-owner	Katri Ahokas
MININT-4HCA	This is a machine description	SAP machines group	Busy	1	—	Co-owner	Johnie McConnell
MININT-4HCB	This is a long machine description that give...	SAP machines group	Online	0	—	Co-owner	Elvis Atkins
MININT-4HCC	—	SAP machines group	Busy	2	—	Co-owner	Amanda Brady
MININT-4HCD	—	SAP machines group	Busy	1	—	Owner	Carole Poland
MININT-4HCS	Description of a machine named MININT-4...	—	Offline	0	3	Owner	Allan Munger
My network machine	This is a machine description	—	Busy	1	4	Co-owner	Kat Larsson
My other machine	This is a long machine description that give...	—	Available	0	5	Owner	Johnie McConnell

Below the table, a 'Desktop flows' dialog box is open, showing fields for 'Connect' (Connect with username and password), 'Machine or machine group' (Select an item), 'Domain and username' (Format as domain/username or username@domain.com), and 'Password' (Password credential). The dialog has 'Create' and 'Cancel' buttons at the bottom.

# Where are we in the scenario, in this Lab?

# Lab 6

## Intelligent Automation: AIBuilder

30 minutes

# AIBuilder in Power Automate

No-code AI

AI for many industry scenarios

AI for multiple industry vertical

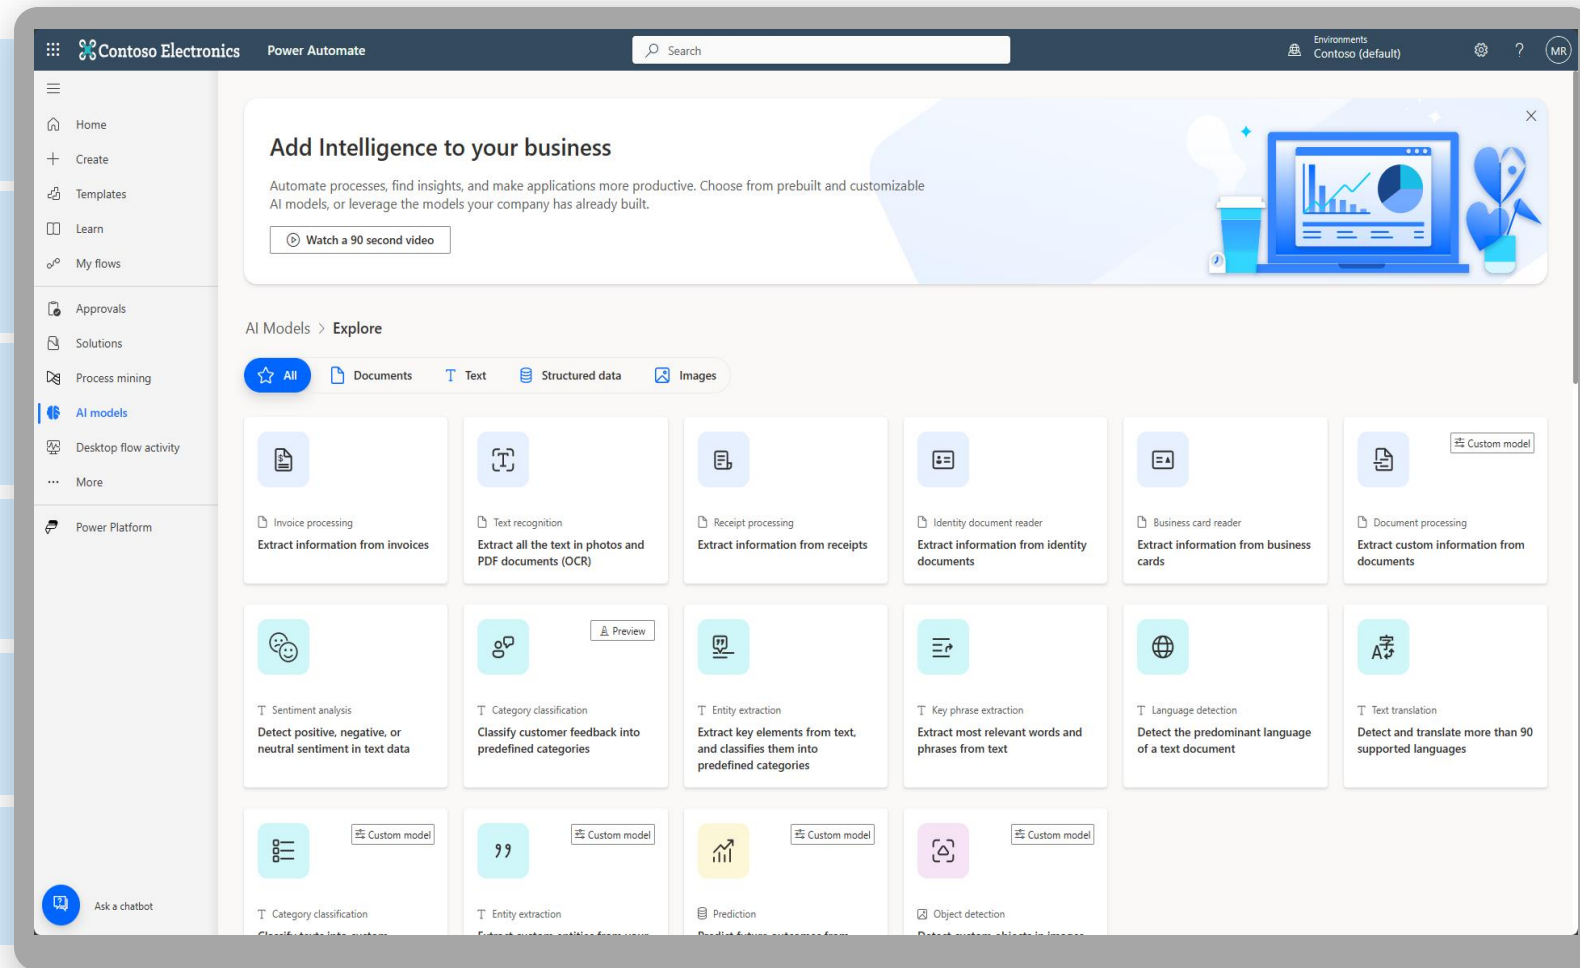

Pre-defined models

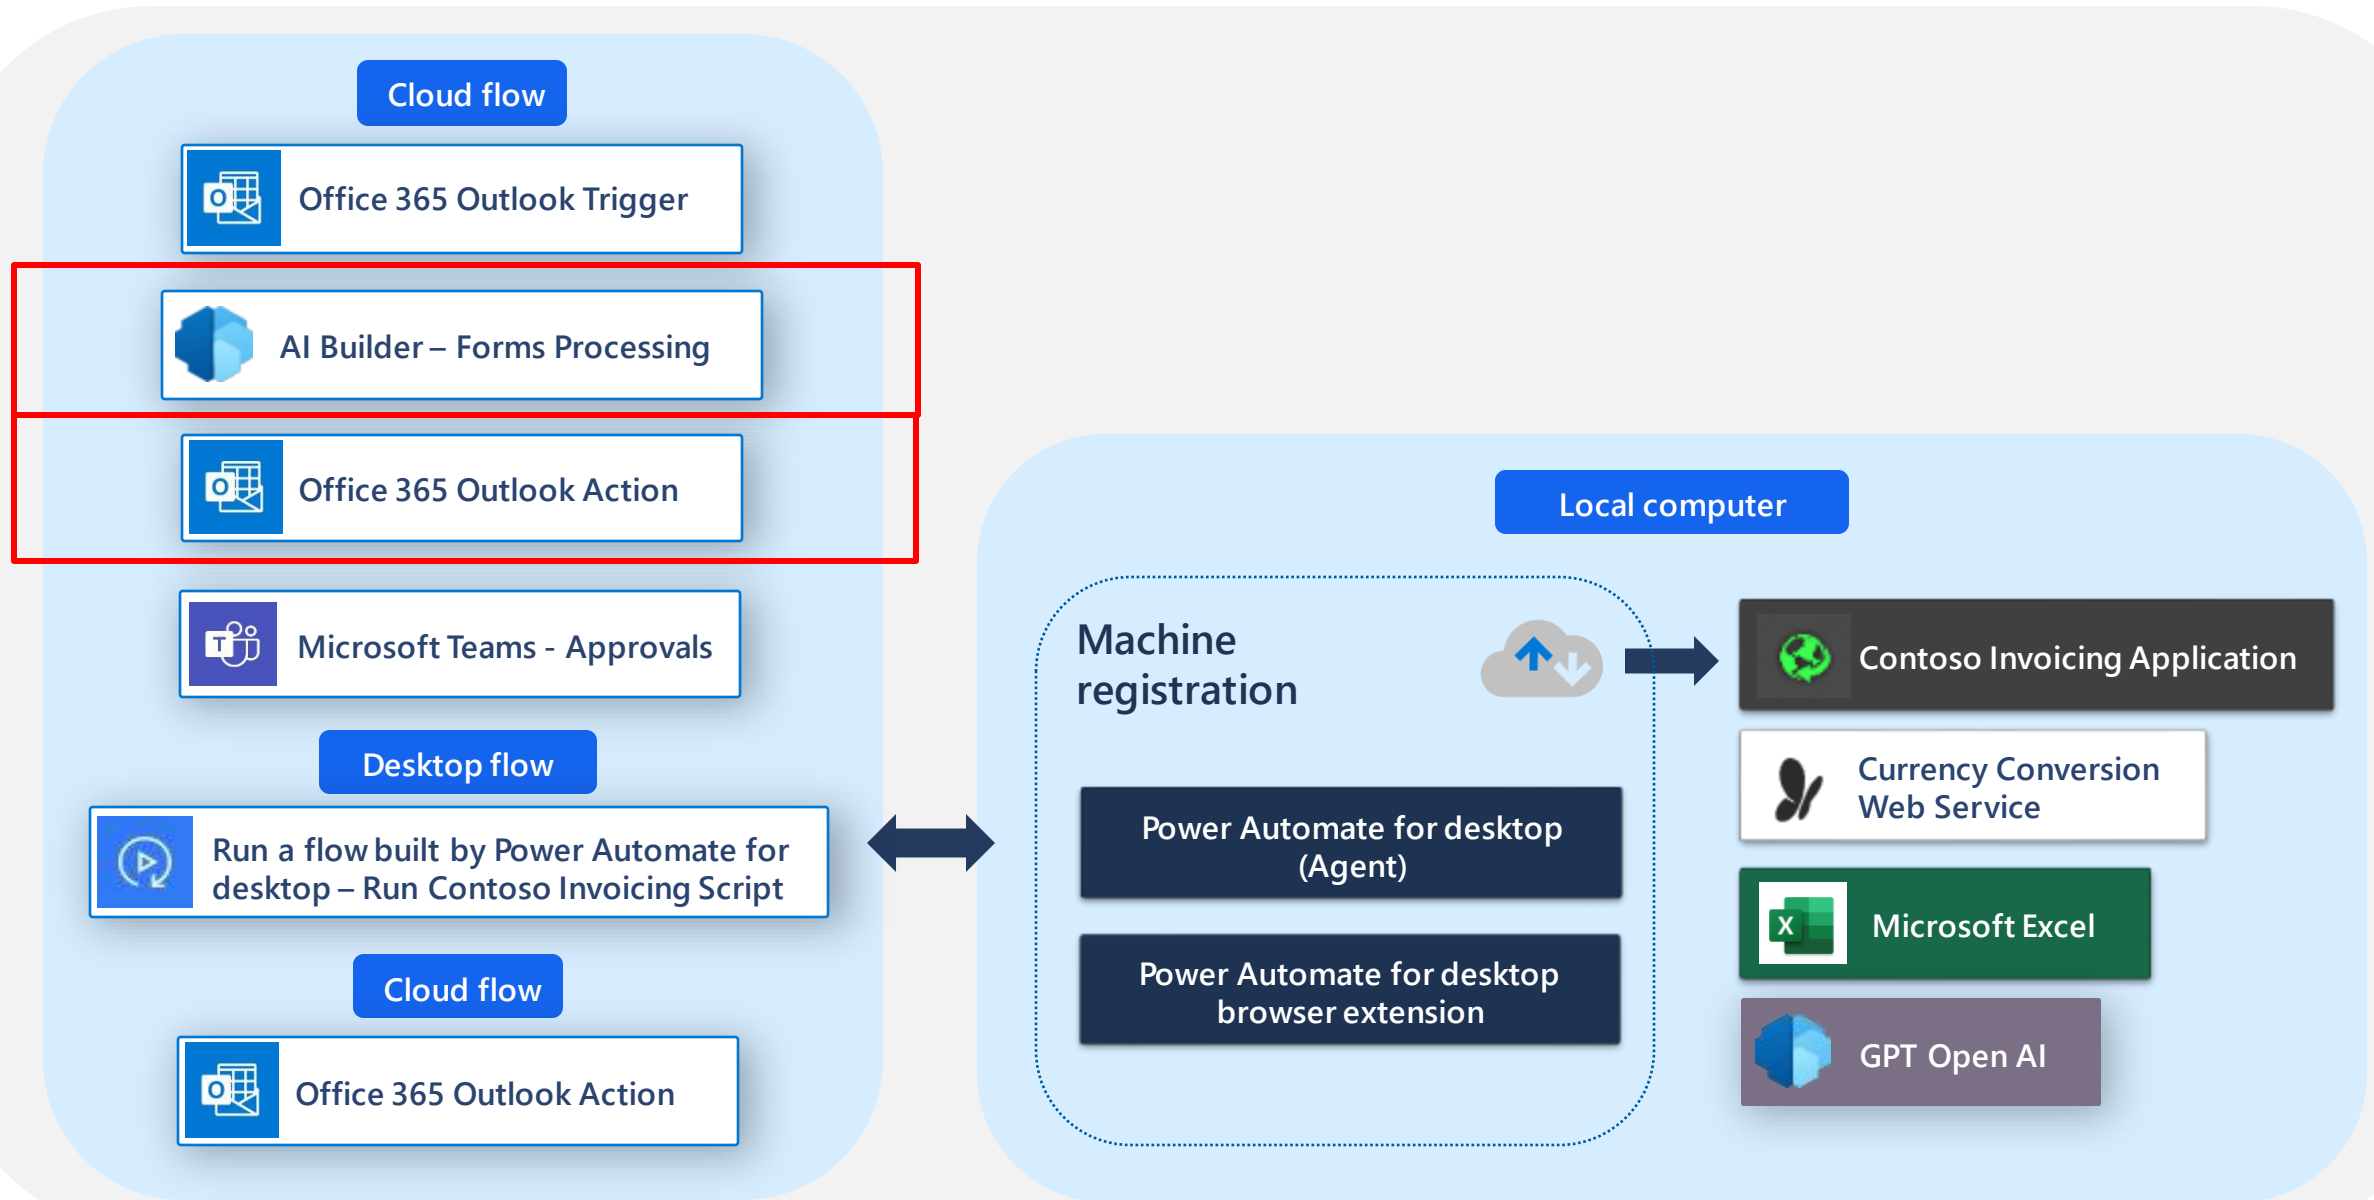

Create Custom Models

Integrate to flow and apps

# Where are we in the scenario, in this Lab?

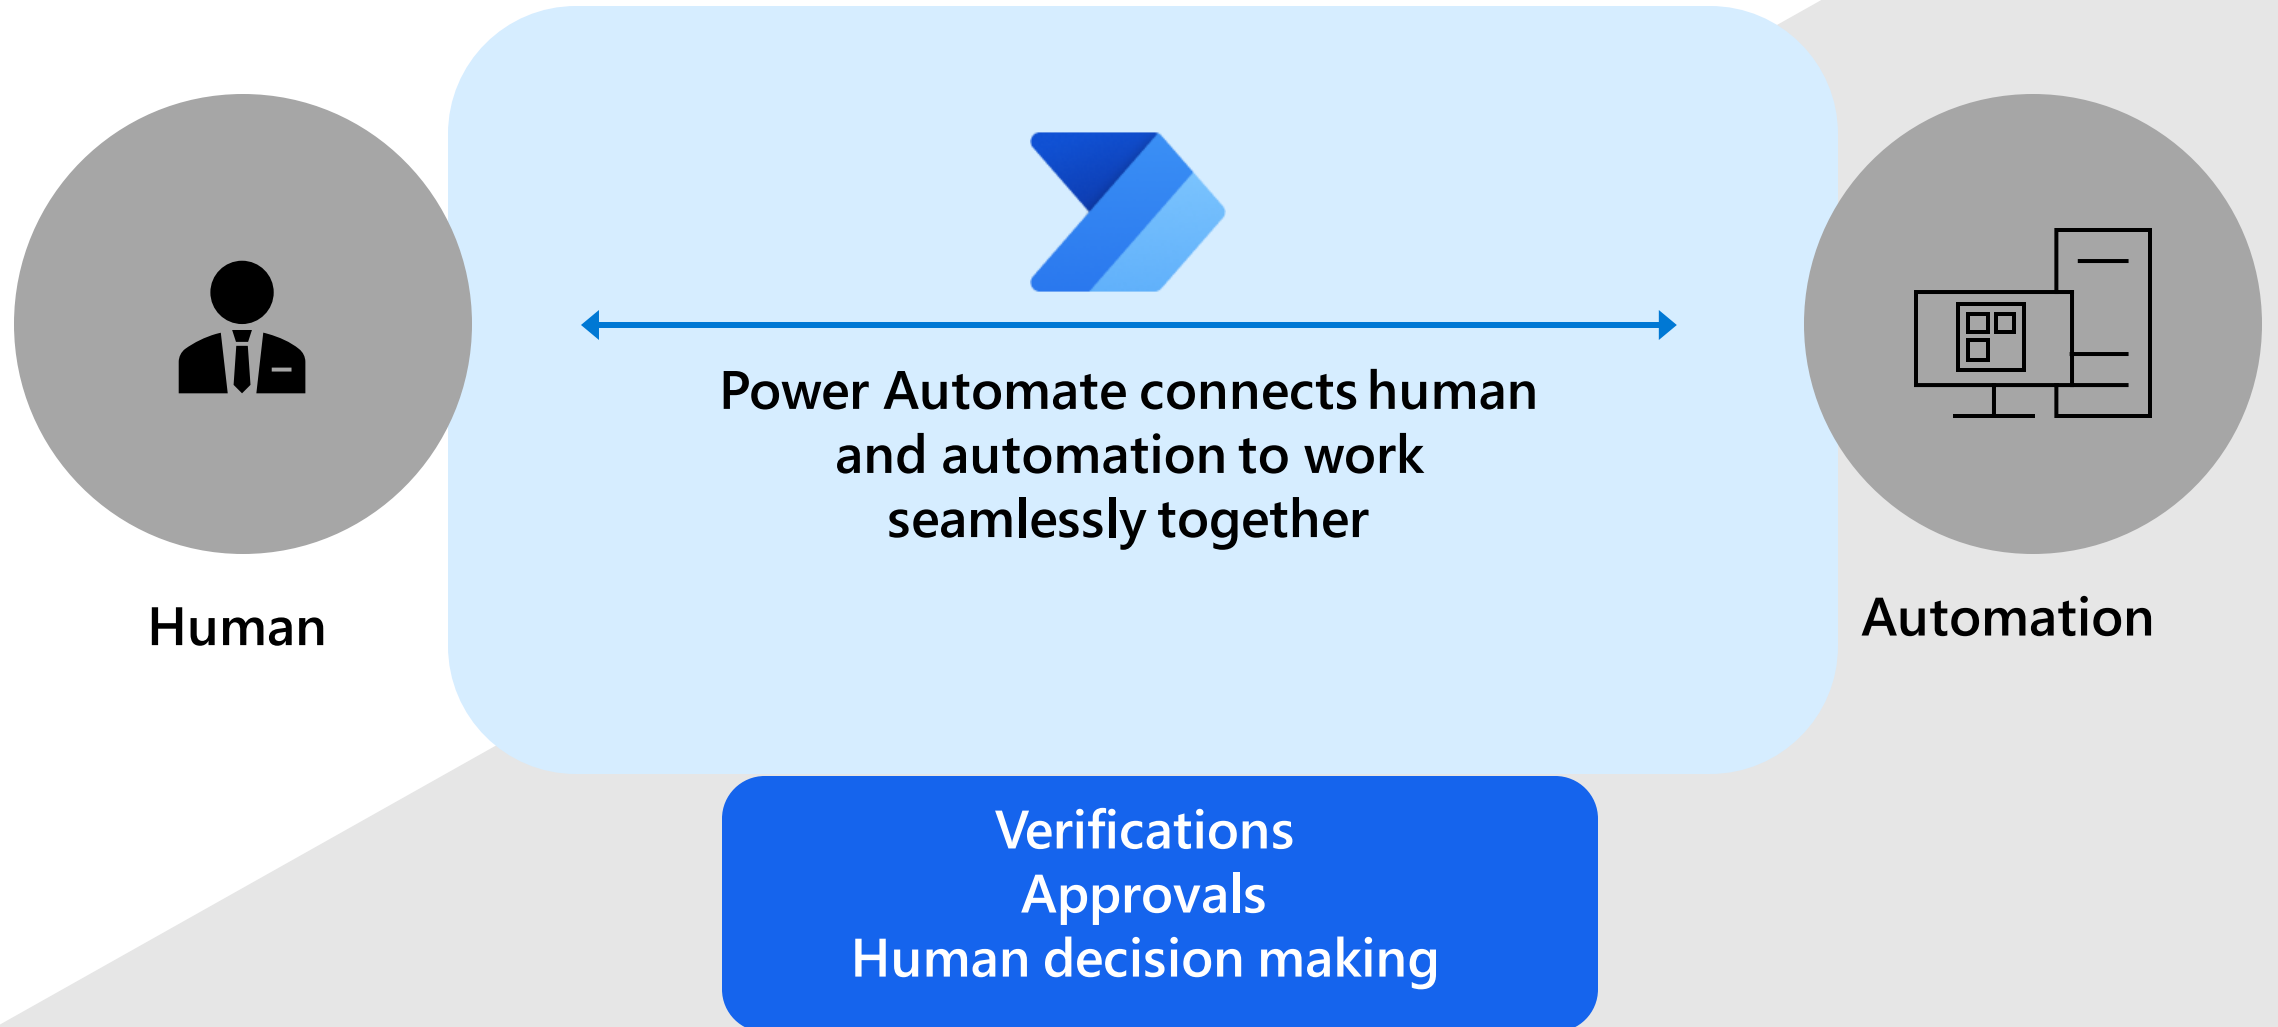

# Lab 7 (optional)

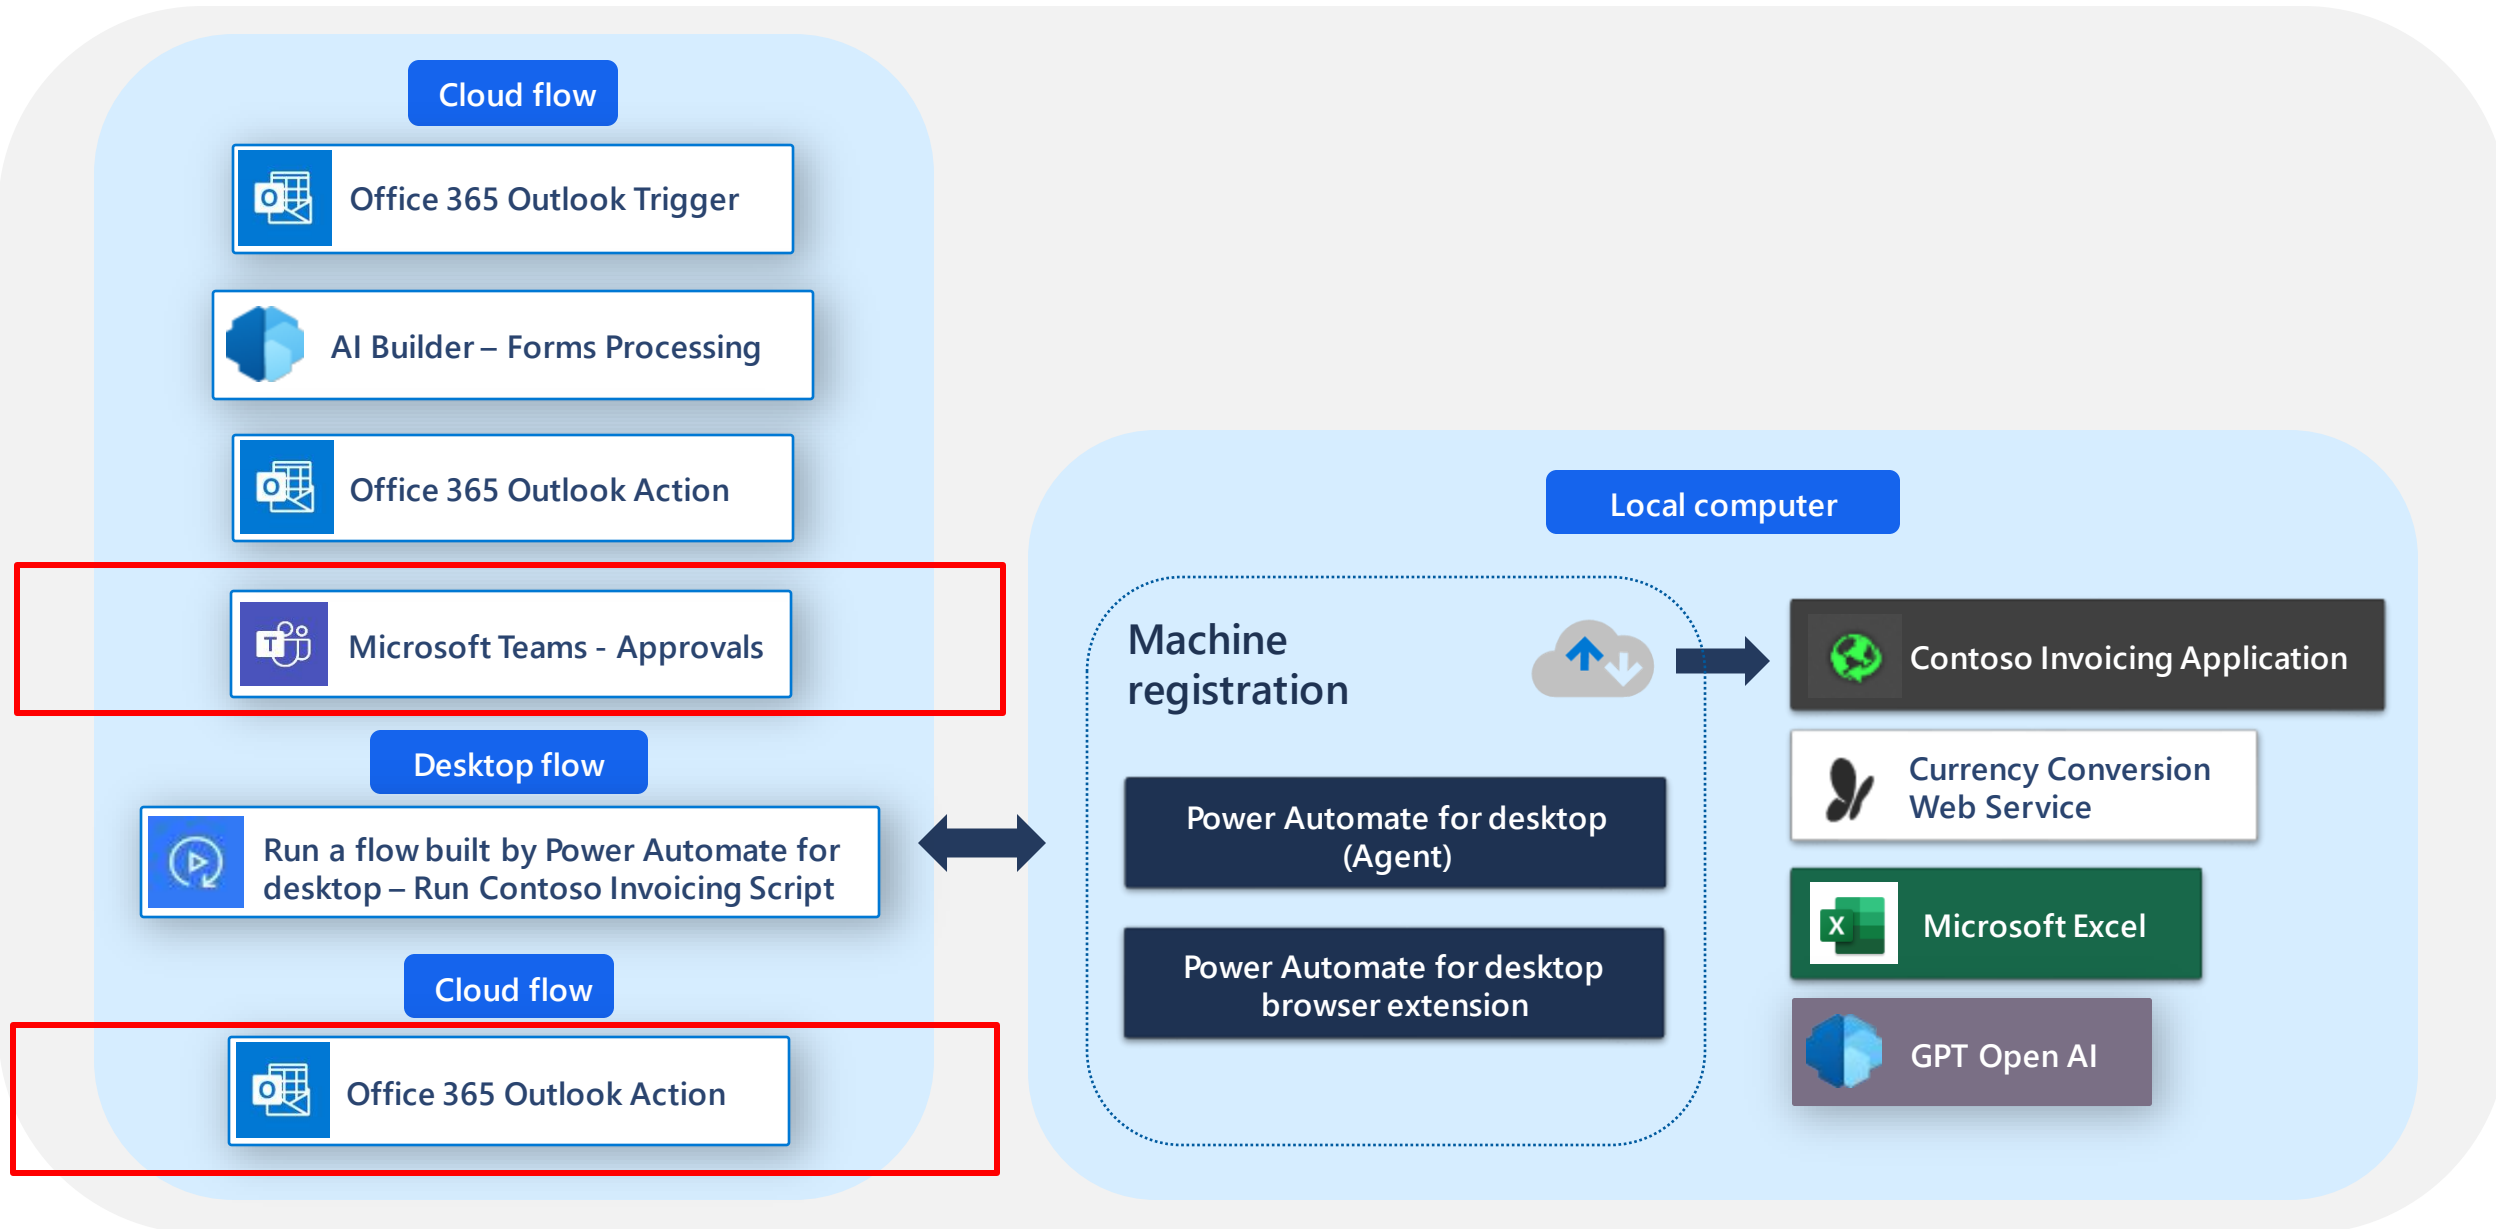

## Integration with Teams for Approvals

30 minutes

# Why we need to invite Human into the automation process

# Where are we in the scenario, in this Lab?

# Part V

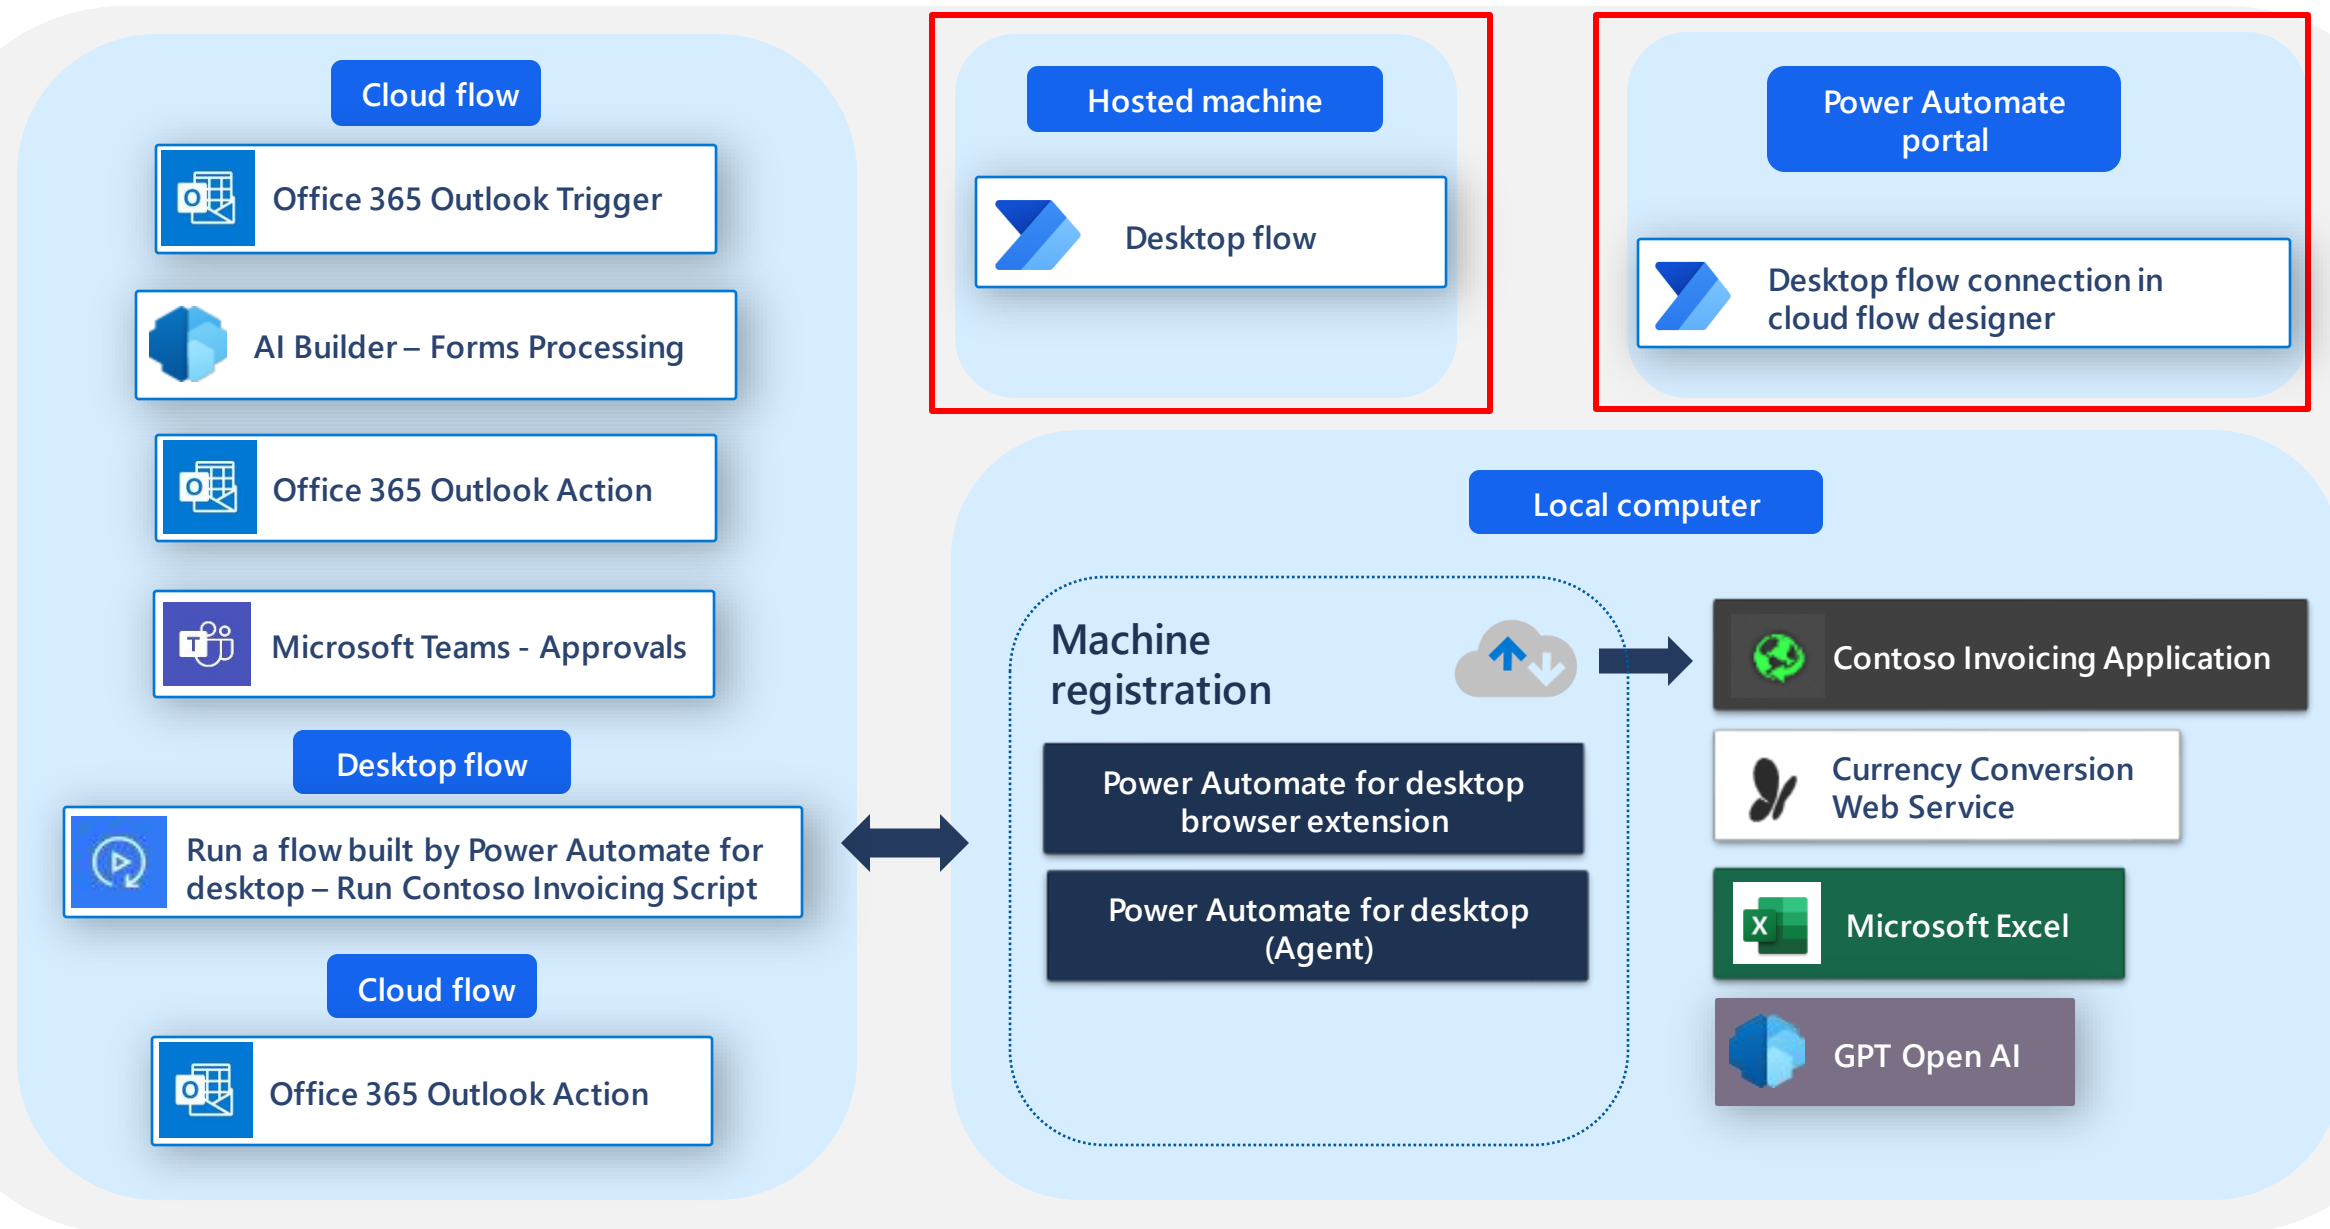

## Scale your automations and infrastructure

# Lab 8

## Hosted Machines and Unattended Automation

30 minutes

# Lab scenario – Invoice processing Solution Architecture

# Standardized and on demand machines for RPA

Using your own machine is sufficient for personal productivity but not beyond that.

## Why?

## Solution

1 Best is a business process being 100% automated

Dedicated machines to run your automation fully unattended

- Automation can run 24/7 with no human errors
- Allows you to keep using your machine

2 Each automation requires its own software setup

Standardized VM images and machine configurations

- Personal/developer software can interfere with the automation
- You may not be able to install the needed software

3 Different hardware configuration may break your automation

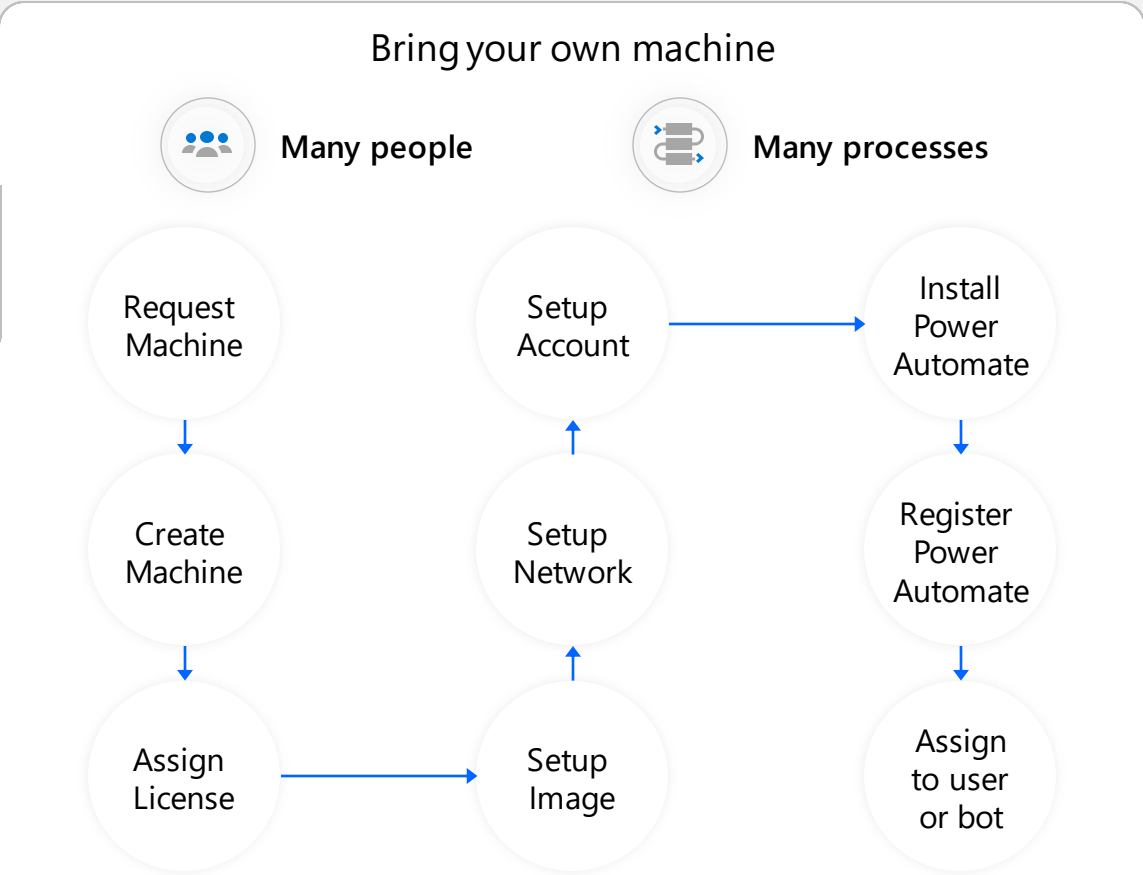

Consistent VM sizes (CPU, RAM, disk, ...) and screen resolutions

- You can't have (all) software setup on your machine
- You have other software not needed for running it

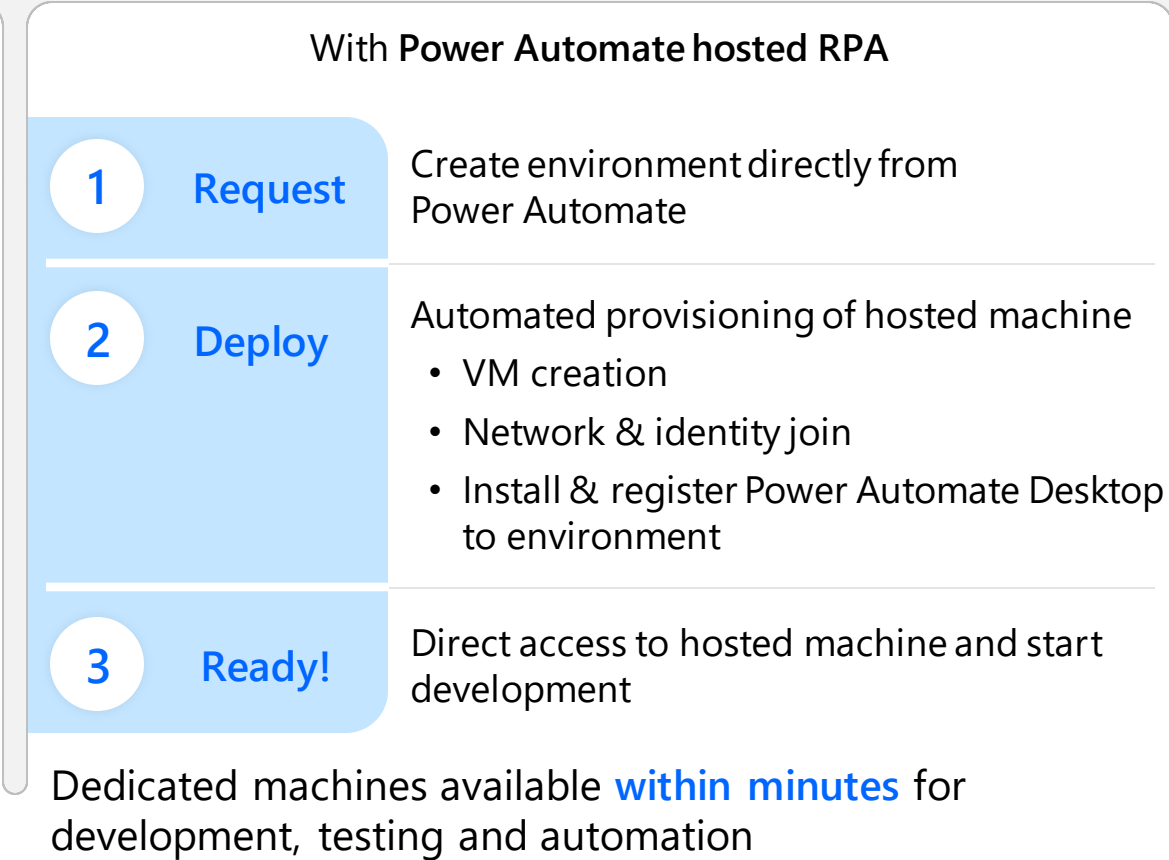

# Seamless setup

Simplify and accelerate RPA machine deployment

## Why make it hard?

## When it can be easy!

# Scale your workloads with hosted RPA

## Single hosted machines

**For** pro and citizen developers

Build or test automation

**For** business users

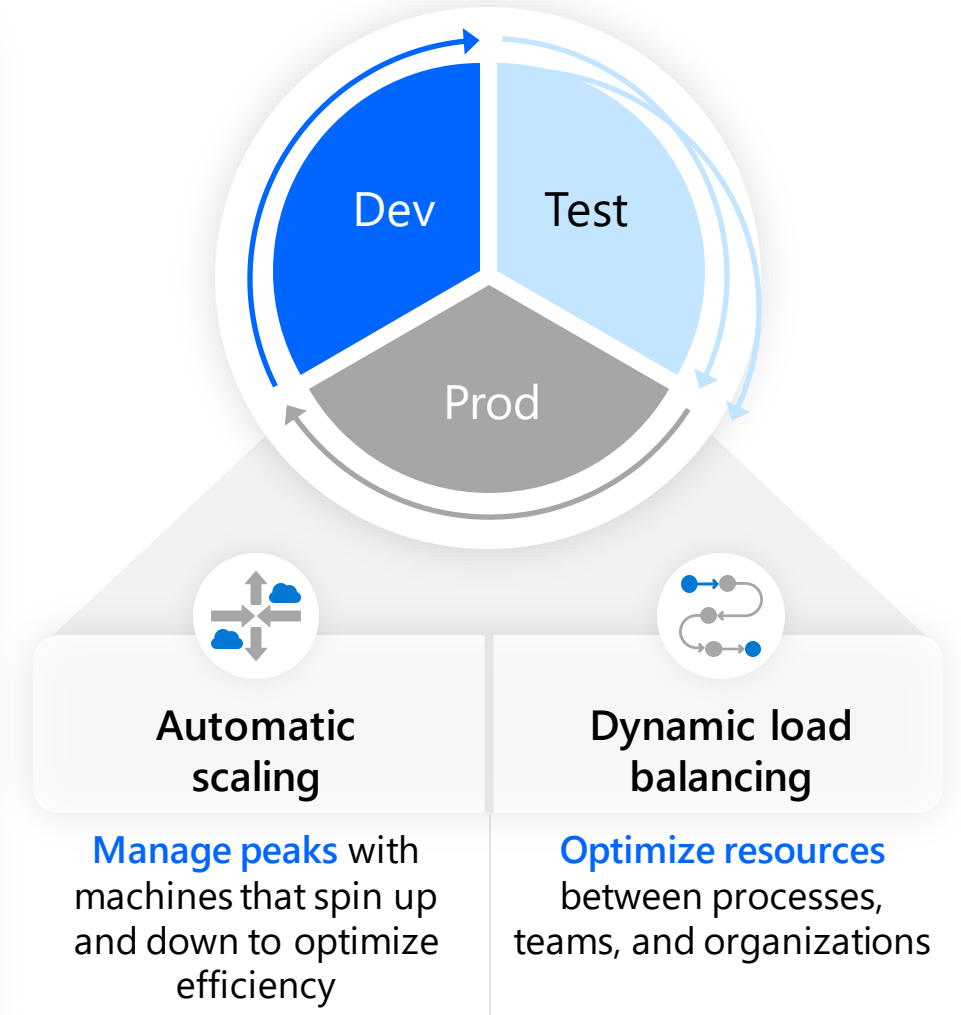

Run automation on dedicated machines

## Hosted machine groups

**For** unattended automation in production

Optimize your resources for higher efficiency and lower cost

# Hosted machine group: Unattended load-management

~10 mins to 1 hour

Average time to  
scale-out/in

Machine utilization

## Observations

- With hosted machine group, multiple RPA processes with varying load levels in an environment are automatically scaled-out/in based on real-time load.
- The number of allocated capacity in an environment are automatically assigned across different RPA processes, ensuring available machines are efficiently utilized

# Hosted machine demo

Mustapha Lazrek

# Hosted machines and unattended automation

---

## **Exercise 1 – Use of hosted machine to run unattended automation**

- Edit your desktop flow (and remove the Excel actions)
- Create a new cloud flow that calls your desktop flow to run on a hosted machine in unattended mode
- Test run.

## **Exercise 2 – Unattended automations at scale**

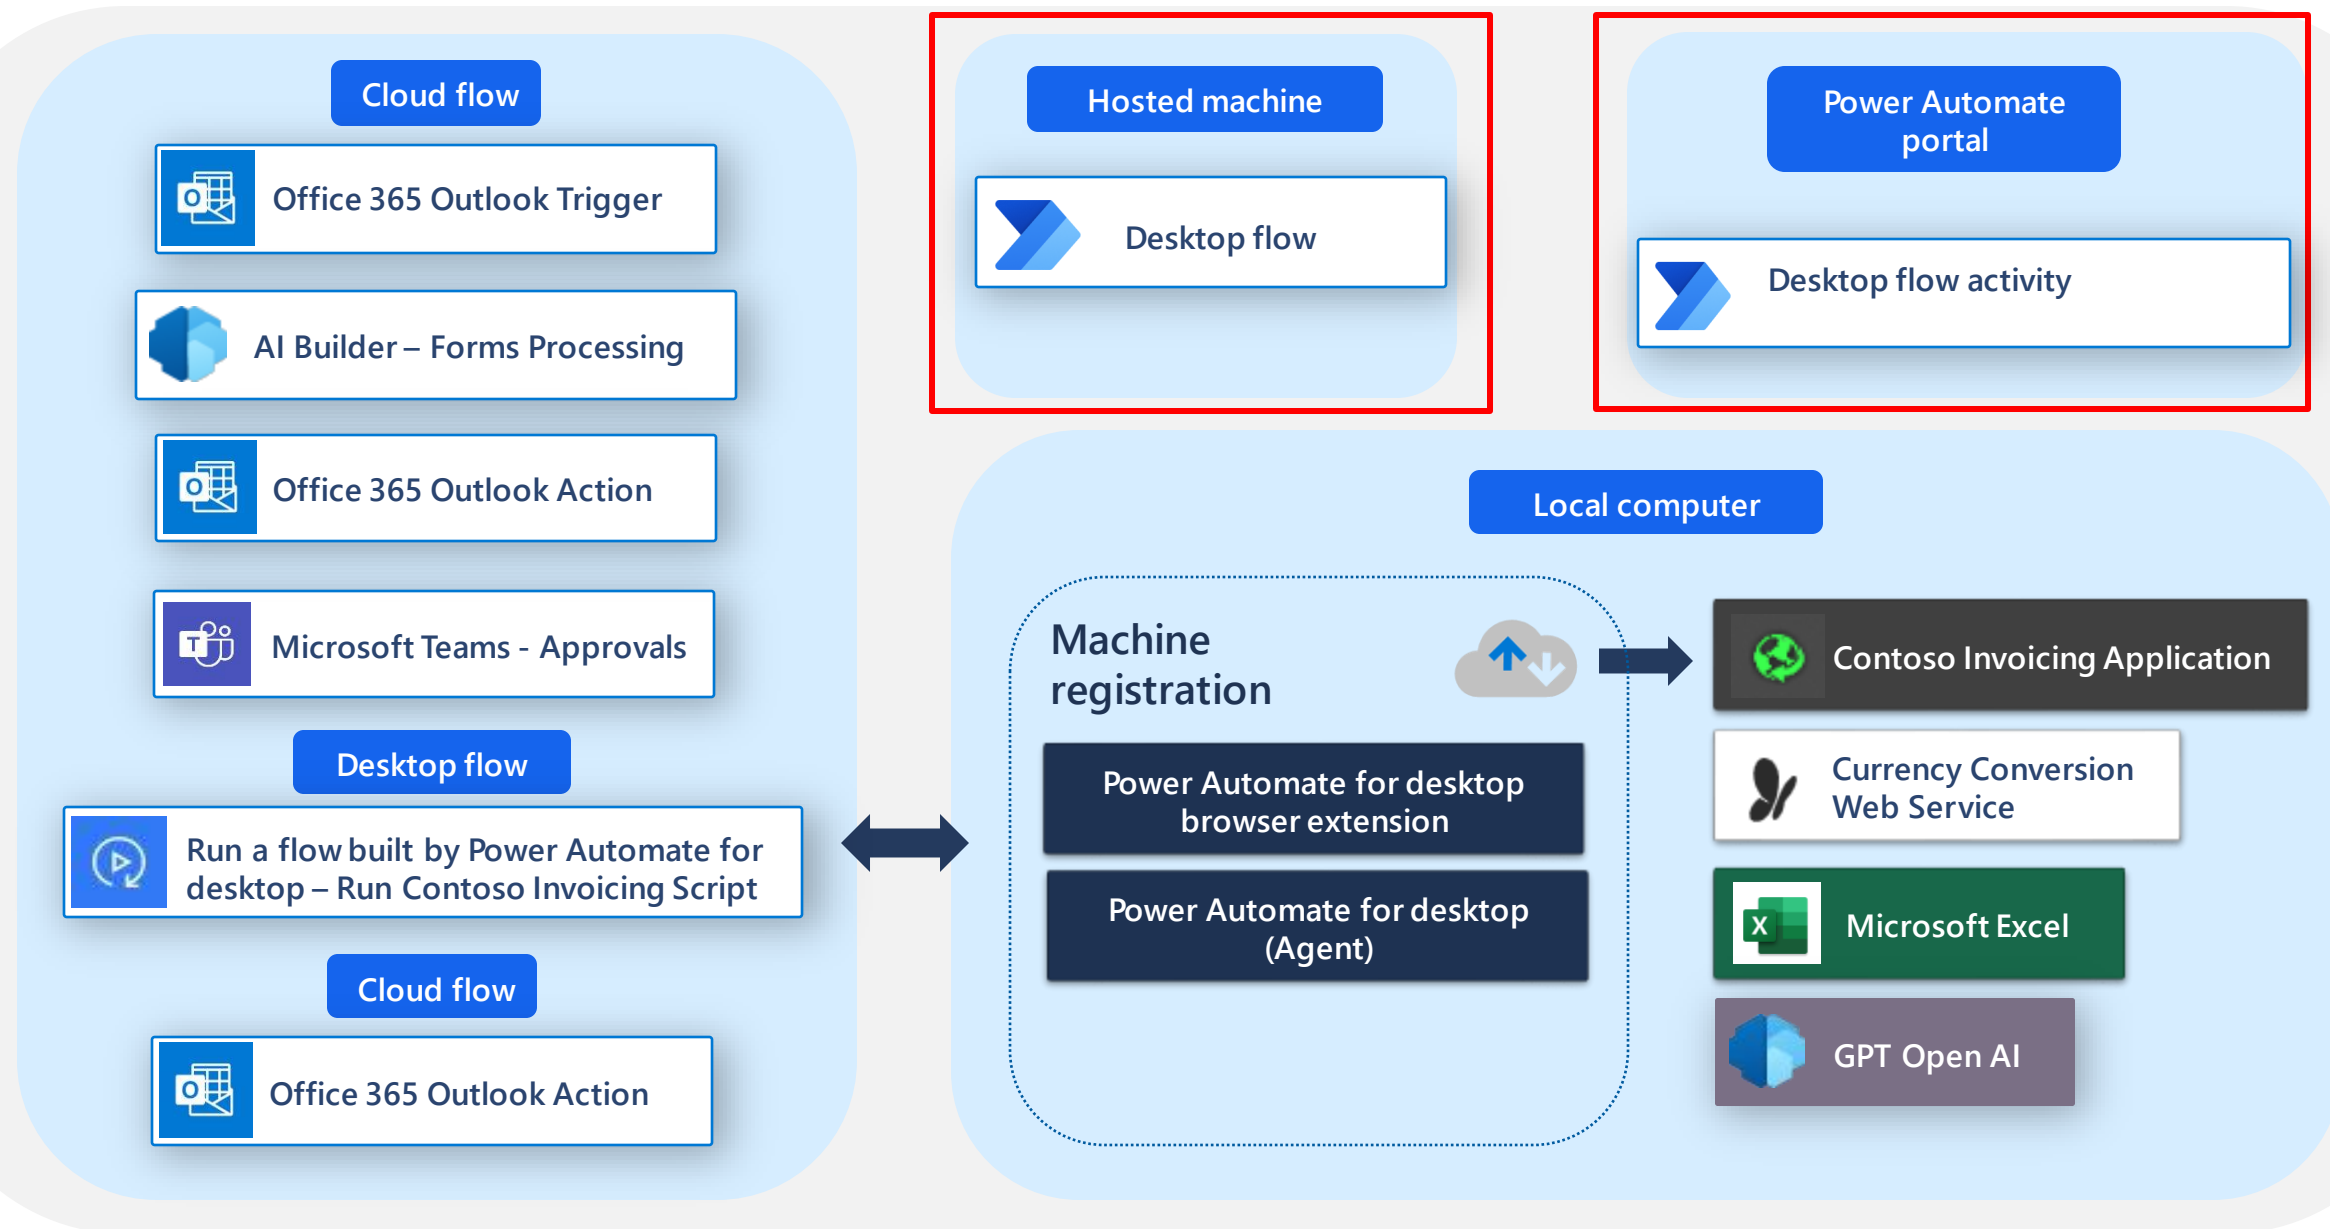

- Create a hosted machine group
- Use this hosted machine group to run your automations at scale
- Test run.

# Lab 9

## Monitor or troubleshoot desktop flow runs and machines

30 minutes

# Lab scenario – Invoice processing Solution Architecture

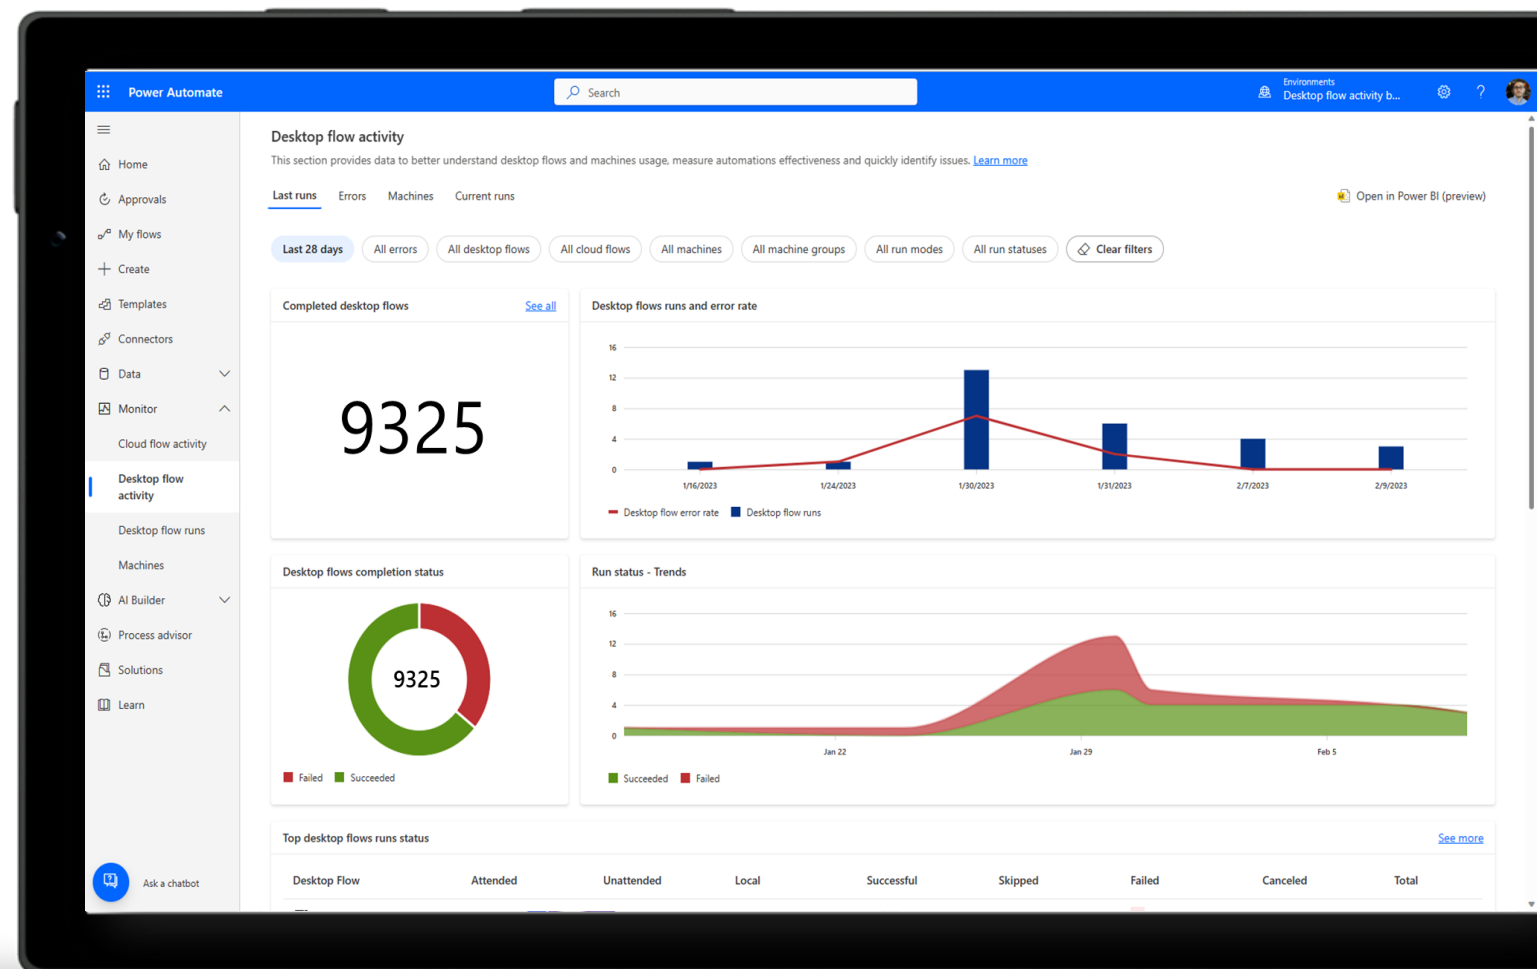

# Desktop flow activity

## Single pane of glass of all desktop automations in the environment

## "Last runs", "current runs", "errors" and "machines" views

- Developers get support while building their automations
- Automation CoEs can monitor deployed automations
- Automation CoEs can monitor all machines registered in the environment (on-prem or hosted)
- Customizable Power BI template (Preview)

# Part VI

## Closing

# Licensing simplification

- More accessible per user license (includes attended RPA)
- No need to choose between RPA and DPA, unique process license for both
- Hosted RPA makes it simpler by providing the infrastructure on top

Power Automate Premium	Power Automate Process	Hosted RPA
<div><div>\$15</div><div>per user/month</div><div>Enables licensed users to automate modern applications via API-based digital process automation (cloud flows) and legacy applications via UI-based robotic process automation (desktop flows) in attended mode.</div><div><ul style="list-style-type: none"><li>• Unlimited cloud flows (DPA) and desktop flows (RPA) in attended mode</li><li>• 50 MB Power Automate Process Mining data storage¹</li><li>• 5,000 AI Builder credits</li><li>• Dataverse entitlements of 250 MB database and 2 GB file</li></ul></div></div>	<div><div>\$150</div><div>per bot/month⁵</div><div>Licenses a single "automation" bot that can be used for unattended desktop automation (RPA), or a digital process automation (DPA) flow that can be accessed by unlimited users in the organization.</div><div><ul style="list-style-type: none"><li>• Cloud flows (DPA)</li><li>• Desktop flows (RPA) in unattended mode</li><li>• Dataverse entitlements of 50 MB database and 200 MB file</li></ul></div></div>	<div><div>\$215</div><div>per bot/month⁵</div><div>Run robotic process automation (RPA) as a service with hosted machine options.</div><div><ul style="list-style-type: none"><li>• Microsoft hosted machine</li><li>• Desktop flows (RPA) in unattended mode</li><li>• 5,000 <a href="#">AI Builder</a> service credits per month</li></ul></div><div>Available as an add-on for:</div><div><ul style="list-style-type: none"><li>• Power Automate Premium</li></ul></div></div>

## Tenant-level user license

- For attended use
- For user or developer scenarios

## Environment-level bot license

- For unattended use
- **Process:** for DPA or RPA with on prem machine (1 per Windows session)
- **Hosted RPA:** for RPA with on hosted machine
